

**The TIA Manual** (revised 2018)  
Transportation Investment Act of 2010  
Georgia Department of Transportation

# The Transportation Investment Act (TIA) Manual

---

The Transportation Investment Act (TIA) Manual was prepared by AECOM for the Georgia Department of Transportation Investment Act (TIA) Office in association with the Georgia Department of Transportation.

**Recommended By:**

08/03/2018

---

Shrujal Amin  
TIA Program Manager

Date

**Approved By:**

Appendix N – Local Government Final Acceptance.....	17

## 1 Introduction

### 1.1 The Transportation Investment Act (TIA) Manual

The TIA Manual is the central coordinating document that describes the essential elements of the TIA Program.

### 1.2 Future Development of the TIA Manual

The TIA Manual is a living document that applies only to the TIA Program. The most updated version can be found on the TIA website ([www.ga-tia.com](http://www.ga-tia.com)).

### 1.3 Purpose of the TIA Manual

The TIA Program contains two different types of project funding:

1. Regional: 75% of the Special Districts TIA proceeds are used to fund all projects on the Special Districts Approved Investment List. Georgia Department of Transportation (GDOT) is responsible for delivery of these projects.
2. Local: 25% of the Special Districts TIA proceeds are divided among all local government within the Special District for use on transportation projects as determined by the local government (the discretionary funds).

Transportation Investment Act of 2010 – Approved Investment Lists

- Central Savannah River Area: <http://ga-tia.com/Content/pdf/CSRA-finalinvestmentlistreport.pdf>
- Heart of Georgia-Altamaha: <http://ga-tia.com/Content/pdf/HOG-finalinvestmentlistreport.pdf>
- River Valley: <http://ga-tia.com/Content/pdf/RiverValley-FinalInvestmentListReport.pdf>
- Southern Georgia: *Link coming soon*

Each TIA project will fall into one of three main categories based on how that project is funded and/or administered:

- **Blended projects** have mixed funding sources and may include federal, state, or local funding will follow the appropriate process as identified by the TIA Office.
- **100% TIA, Locally Let (Administered) projects** are those funded entirely with TIA funds but administered by a local government entity through an agreement with GDOT;
- **100% TIA, GDOT/TIA Let projects** are also funded entirely with TIA funds, but are administered entirely by the TIA Program.

The TIA Manual is the core document for defining how the TIA Program is managed. It is intended to provide high-level guidance necessary to efficiently and effectively deliver the projects on the Approved Investment Lists. For any specific areas that are not included in the TIA Manual, please see guidance from the Program Manager (PgM).

In the event of a conflict between the TIA Manual and any individual contract, the legally binding contractual agreements will prevail.

Regardless of whether the roles and responsibilities are defined by this TIA Manual or a contract, the PgM, with the concurrence of GDOT, determines whether costs associated with the delivery of a project are eligible for payment or reimbursement using TIA funds.

### 1.4 Intended Users of the TIA Manual

The audience for this document are the GDOT, participating counties and municipalities, consultants, contractors, and advisors.

## 2 TIA Program

### 2.1 Program Goals and Objectives

The goals and objectives of GDOT in delivering the projects included in the TIA Program are:

- Support Georgia's economic growth and competitiveness through transportation improvements
- Improve access to jobs
- Reduce congestion costs

- Improve efficiency and reliability of commutes
- Ensure more efficient and reliable movement of freight, cargo, and goods
- Improve interregional connectivity
- Support local connectivity to statewide transportation network
- Maximize the value of Georgia's transportation assets: optimize capital asset management as well as flow of people and goods through the network

## 2.2 Program Requirements and Regulations

The TIA Program is a "project driven program" designed to fund projects that have limited or no funding, but are significant to each Special District. Each Special District project list reflects prioritized decisions that have been made by local elected officials and the public. GDOT is prepared to deliver these transportation improvement projects in these Special Districts by implementing a streamlined delivery process that will assure strict attention to project delivery, budgets, and schedules. This process will incorporate coordination with Regional Commissions and local governments, and will demonstrate transparency and accountability to the Special Districts, Citizens Review Panels (CRPs), and the public.

The projects in the Approved Investment Lists constitute the program for each Special District. The fundamental elements of the management of the budget, schedule, execution, and delivery of the projects contained in this list are:

- All projects must be delivered for each Special District.
- The project budgets are defined in the Approved Investment List(s) and are the maximum amount of Special District transportation sales and use tax proceeds (TIA funds) available for the project. Therefore, projects will be designed and constructed to budget. GDOT is not responsible for supplementing or providing any additional funds unless otherwise shown in the Approved Investment List(s).
- Projects will be delivered on a 'pay-as-you-go' basis or as approved by GDOT should other funding be provided from a sponsor. GDOT is responsible for determining when a project or project phase is initiated if TIA funds are required for the phase.
- The obligation for payment/reimbursement is limited to the amount of TIA funds available. Eligible Project Costs, as defined in O.C.G.A. § 48-8-242(2), and in the Intergovernmental Agreement (IGA) between Georgia State Financing and Investment Commission (GSFIC) and GDOT, will be paid/reimbursed to the sponsor and/or consultant/contractor upon the completion of:
  - Project element or project is complete and invoicing is submitted to GDOT
  - GDOT's certification of invoices to GSFIC
  - GSFIC's approval of GDOT's certification
  - GSFIC's payment/reimbursement to GDOT

To define the limitation of tax funds and payment obligations of GDOT to any entity under contract with GDOT relating to the TIA Program, all contracts will include the following or similar provisions:

1. The parties acknowledge that the program is one hundred percent (100%) funded with Special District transportation sales and use tax proceeds collected pursuant to the Act, and that GDOT's payment obligations related to the program and project are strictly limited as set forth herein. The parties further acknowledge that no entity of the State of Georgia, other than GDOT, has any obligations to the consultant/contractor related to this program or project.
2. The obligation of GDOT to pay or reimburse any incurred cost or pay any lump sum cost, is expressly limited to the amount of Special District transportation sales and use tax proceeds remitted to GDOT by GSFIC and designated by GDOT for the program in general and the project specifically. This agreement does not obligate GDOT to make any payment to the consultant/contractor from any funds other than those made available to GDOT from the Special District transportation sales and use tax proceeds by GSFIC and designated by GDOT for the program in general and the project specifically. In the event the funds made available to GDOT from the

Special District transportation sales and use tax proceeds are insufficient for the program and project as designated by GDOT, GDOT's payment obligations shall not exceed the availability of such Special District transportation sales and use tax proceeds. GDOT shall have the right at its sole discretion to terminate this agreement immediately upon notice to the consultant/contractor without further obligation of GDOT to the extent that the obligations exceed the availability of such the Special District transportation sales and use tax proceeds for the program and project as designated by GDOT. GDOT's certification as to the availability of the Special District transportation sales and use tax proceeds as designated by GDOT for the program and project shall be conclusive.

## 2.3 Program Management Work Flow

To determine the approach and procedures to deliver TIA projects, users must understand the standard workflow as shown in Figure 2-1. Procedures are based on these primary questions:

- What is the funding source?
- Who is Letting the project to construction?

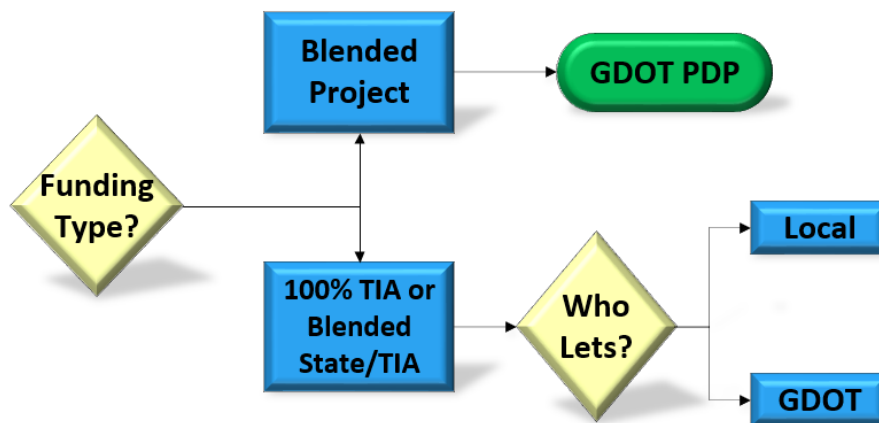

Figure 2-1 TIA Standard Work Flow

Projects that are a blend of TIA funding with Federal and/or State funding will follow the [GDOT Plan Development Process \(PDP\) Manual](#) for those phases where blended funds apply. Procedures for projects that are 100% TIA funded will follow this TIA Manual, and will further depend on whether the project is let to construction by GDOT or the Local Government sponsor and whether the project is on the GDOT managed roadway. For GDOT Let projects that are 100% TIA funded, the TIA PgM will be involved with document reviews. For Local Let projects that are 100% TIA funded, the local sponsor would be responsible for certifications.

## 2.4 Disadvantaged Business Enterprise (DBE), Small Business, and Veteran Owned Business

All projects in the TIA Program that include federal funds will adhere to existing [GDOT DBE](#) participation goals and are subject to all oversight in that regard.

On May 17, 2012, the GDOT, acting by and through its Board, passed a [Resolution](#) that:

1. Reaffirmed its commitment to Title VI of the 1964 Civil Rights Act of nondiscrimination in the delivery and management of TIA funded projects; and
2. Encouraged the use of DBE's (including minority and woman-owned businesses), small businesses, and veteran-owned businesses in any project that is funded in whole or in part by TIA funds, and encouraged wherever

practical and feasible, the Local Government, or governments, that manage TIA funded projects to include the same in its delivery and management of a project.

Reference to this resolution shall be included in all 100% TIA funded projects contracts regardless of Letting responsibility. Contractual requirements will further detail reporting requirements.

### 3 Program Delivery

#### 3.1 Management Authority

O.C.G.A. § 48-8-249 and the IGA delegates to GDOT the management of the budget, schedule, execution, and delivery of the projects contained in the Approved Investment Lists for all transportation projects except bus and rail mass transit systems and passenger rail, in any Special District the boundaries of which are not wholly contained within a single Metropolitan Planning Organizations (MPO).

GDOT is responsible for delivering the projects in all Special Districts which voted to levy the Special District transportation sales and use tax. O.C.G.A. § 48-8-249(c) requires GDOT to determine if a project design and construction should be managed by GDOT, a Local Government, or another public or private entity. Once that determination has been made, the project must be implemented in accordance with applicable Federal, State and local requirements. It is critical that projects be delivered in the most cost effective manner possible as to maximize the use of the available TIA funds.

GDOT will coordinate with the Local Governments to determine their interest in project delivery. Each Local Government wishing to deliver a TIA project must complete the [Local Project Delivery Application](#) as required by O.C.G.A. § 48-8-249(c) for each project. At GDOT's discretion, delivery by Local Governments may be by phase or by the entire project. Upon review and approval by GDOT, a project specific contract defining the responsibilities of GDOT and the Local Government for delivery will be executed.

#### 3.2 Roles and Responsibilities

GDOT's organization chart, which includes the TIA Office, can be found on GDOT's website:

<http://www.dot.ga.gov/AboutGDOT/Offices>

##### 3.2.1 Program Team Members and Responsibilities

Key entities of the TIA Program team include:

- Georgia Department of Revenue (GDOR)
- GSFIC
- TIA Office
- PgM
- Consultants (Construction Engineering and Inspection [CEI], Design Consultant [DC], Engineer of Record [EOR])
- Local governments
- Contractors

The following graphic (Figure 3-1) depicts the role of each team member. CRPs provide oversight of the TIA Program. The Regional Commissions support the CRPs, and provide a forum for the Special Districts to address issues of a regional significance that may occur.

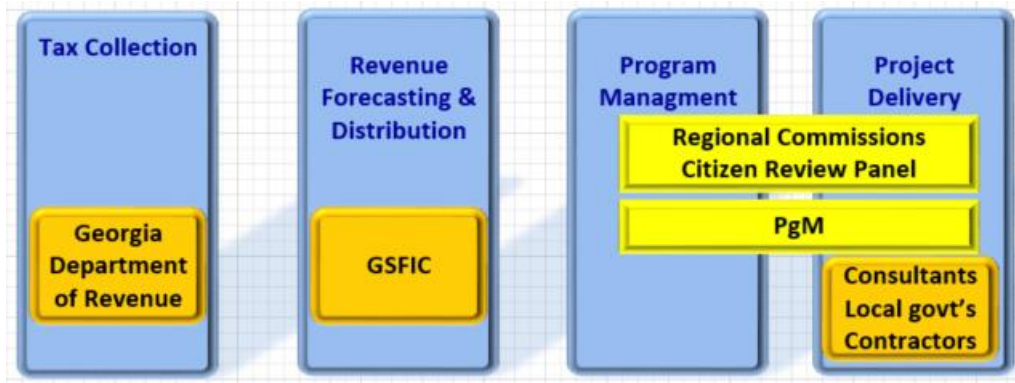

Figure 3-1 TIA Program Agency Roles

There are a number of GDOT offices, as well as other State offices and agencies that support the core team with the delivery of the Program. Detailed roles and responsibilities for each GDOT Office can be found on their website (<http://www.dot.ga.gov/AboutGDOT/Offices>). Coordination with other agencies will include, but are not limited to, the following:

- Georgia Department of Natural Resources (GDNR) - Wildlife Resources Division (WRD) and Environmental Protection Division (EPD)
- U.S. Department of Transportation, Federal Highway Administration (FHWA)
- U.S. Army Corps of Engineers (USACE)
- Federal Emergency Management Agency (FEMA)

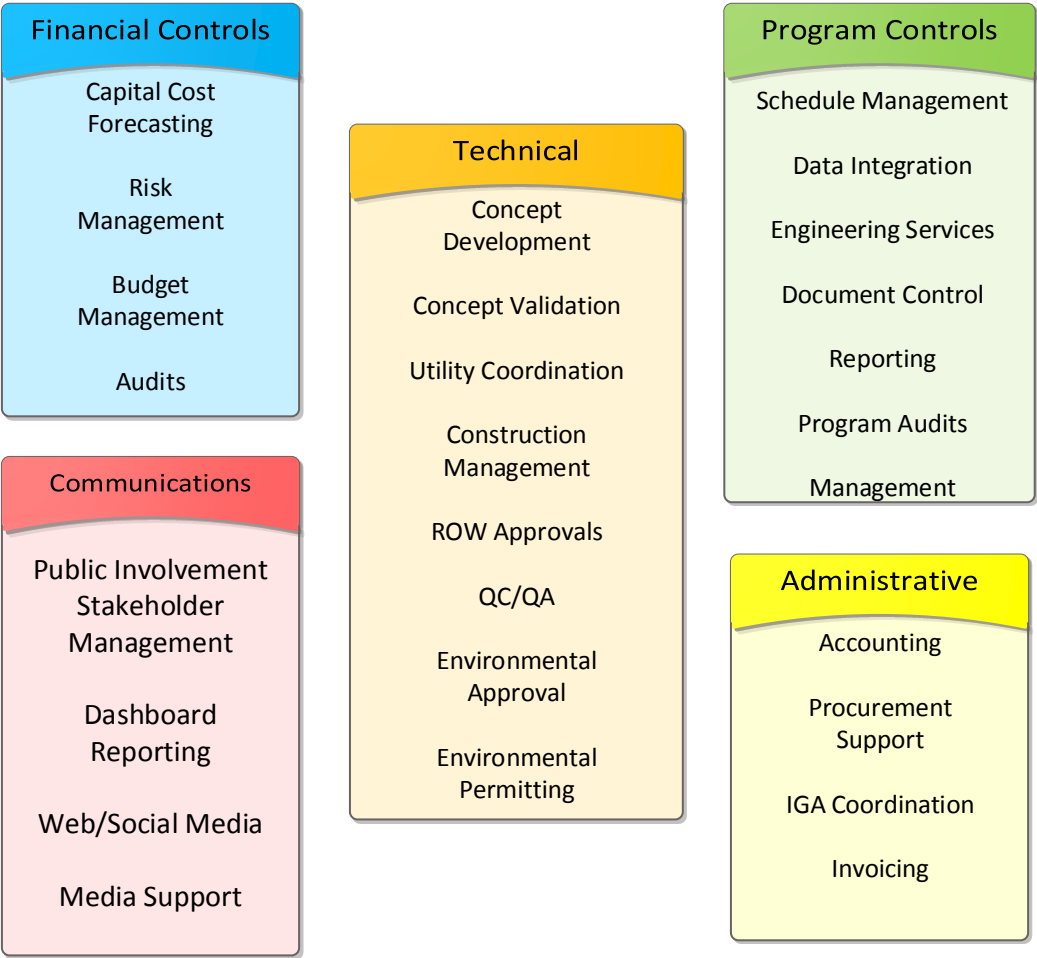

### 3.2.2 Key Management

The PgM will report directly to the TIA Administrator, and is in charge of overall management of the PgM services and personnel to ensure that the management activities are conducted in accordance with the TIA Manual, the Act, and the contractual provisions between GDOT and the PgM. As the principal contact with GDOT, the PgM is responsible and accountable for the successful completion of the PgM contract within the agreed scope, which includes the requirements of being within budget and on schedule. The PgM is supported by a Program Team consisting of pre-construction managers, Construction Managers (CMs), program controls specialists, Subject Matter Experts (SMEs), and administrative support staff.

3.2.3 PgM Responsibilities

The following blocks provide an overview of PgM's duties:

The PgM assists with developing the strategy best suited for the successful delivery of the Program. The PgM provides collaboration, guidance, and acceptance of schedules, and reliable cost estimates to GDOT. The PgM maintains the Master Program Schedule, the cash flow model, and communicates program status through dashboard reporting.

It is the PgM’s responsibility to ensure that proper coordination is occurring between the EOR, Local Government, GDOT and all other project team members involved in each of the projects. In conjunction with GDOT, the PgM will determine the frequency of project status meetings to ensure effective management of the projects.

For 100% TIA funded projects, the PgM will manage the scope, schedules, and budgets for of all projects in each Special District; keep GDOT well-informed of the progress of the projects through all phases; ensure that approvals and certifications are obtained, close-out documents are completed in a timely manner, warranty items are properly addressed; and serve as Project Manager (PM) on projects as directed by GDOT.

For blended projects, the PgM will coordinate with the GDOT designated PM, and manage the project schedule and cash flow.

### 3.2.4 Certifications

For 100% TIA funded projects, the PgM is responsible for compiling all certifications and information required from the project delivery team prior to beginning subsequent project phases or project Letting. Responsibilities related to certification of environmental compliance, utility clearance, and Right of Way (ROW) can be found in the applicable sections of this manual.

### 3.2.5 Work Authorizations

The PgM will provide work authorizations with GDOT concurrence for each phase or any sub phase of a project regardless of project sponsor or as otherwise specified in an intergovernmental agreement.

### 3.2.6 Project Cost Estimates

TIA budgets presented on the Approved Investment Lists include all costs associated with administration, design, construction, construction inspection, and material testing necessary to complete the project. The total cost to the project must be less than the budget, and funds must be available for payment at the time each element of the work, or portion of the work, is complete. At each phase of design development, the EOR will produce an engineer's estimate. The PgM will review these estimates, establish contingencies, monitor cash flow and evaluate impacts to the program. The PgM and the EOR will work together to modify the scope as necessary to deliver the project in a manner which meets the intent or predetermined benefit for the project.

### 3.2.7 Band Change Requests

The projects are to be let to construction in their original band unless the band change requested by the local governments using the [Band Change Request Procedure](#) is followed and approved by the TIA Administrator.

## 4 Communications Management

### 4.1 General Policies

#### 4.1.1 Conflicts of Interest

PgM staff, consultants, and contractors shall adhere to policies and provisions of O.C.G.A. § 45-10-20 through § 45-10-28 relating to Conflict of Interest.

For the purposes of the TIA Manual, the definition of "consultant" shall include consultants, Local Governments, and contractors. All references to consultant services shall include any and all services provided by Local Government or the contractor.

#### 4.1.2 Communications Management Policy

The primary contact for all public relations matters shall be the PgM. Only the PgM, or their authorized TIA communications manager, and individuals specifically authorized by GDOT, may engage in discussions about the TIA Program with external third parties, including but not limited to members of the press and other media, government, and the general public. No other individual or inside party shall speak on behalf of the TIA Program, its projects, and related interests unless specifically designated to do so. Individuals may be contacted by outside parties or the media requesting information about the TIA Program. In order to avoid providing inaccurate, incomplete or otherwise sensitive information to outside sources, all inquiries regarding the TIA Program must be directed to the PgM. Non-intentional disclosure, or any other contact with public and press entities, must be reported along with the subject matter discussed and contact information for all participating parties.

Individuals and inside parties are also prohibited from disseminating information and discussing any matters related to the TIA Program, directly or indirectly, without prior approval of the PgM or GDOT, via traditional, new or developing mediums. This includes both personal and company social media platforms, online forums, digital written, and verbal communications. Response and reaction via the aforementioned mediums is also subject to all regulations as documented by this policy.

Communications procedures are designed to support all program functions by ensuring smooth communications among all participants and organizations.

Except for matters contractual in nature as specifically spelled out in a consultant or contractor's contract, all communications regarding the TIA Program shall be addressed to:

GDOT TIA Office  
State TIA Administrator  
One Georgia Center  
600 West Peachtree Street  
Atlanta, GA 30308

## 5 Scope, Budget, and Schedule Management

### 5.1 Design to Budget

All projects will be designed and constructed to the project budget as established in the Approved Investment Lists. Appropriate contingencies as determined by the PgM will be included in the project cost estimates. Each project must be delivered as presented in the Special District's Approved Investment Lists. The project scope shall be based on the work necessary to achieve the stated public benefits while staying within the project budget. Non-regional projects may not have a public benefit identified on the Approved Investment List.

The EOR shall take a practical design approach to provide the most cost efficient design possible that satisfies the project scope and budget.

Should a project budget be determined to be insufficient, the EOR will have flexibility, with PgM concurrence, to modify certain project elements to reduce project cost as necessary to bring the project into alignment with the budget. However, the project should still meet the description from the project list or would need approval from the CRP. The cost estimate at the concept stage should identify any scope reduction that would cause the project benefits not to be satisfied. At a minimum, cost estimates will be evaluated at project milestones throughout the development process to track cost to complete budget requirements.

Below is the order of precedence of project elements that the EOR should use in designing to budget without compromising applicable engineering guidelines and standards. The list starts with the most important elements to the least critical:

- Safety features
- Structural members and appurtenances
- Operational features
- Pavement structure
- Typical sections
- Aesthetic and enhancements (unless necessary to satisfy the stated benefit)

The PgM will ensure the project is designed and constructed within budget as shown in the Approved Investment Lists. The PgM, with GDOT's concurrence, is responsible for approving the use of project contingencies regardless of the Letting responsibility.

### 5.2 Project Schedules and Cash Flows

TIA Projects must be let to construction within the designated band. Schedules, and an initial cost estimate, shall be included with the [Concept Report](#). The PgM maintains the Master Program Schedule, and the consultant provides the project specific schedule details that conform to the master schedule. The consultants and contractors must include major milestones and activities with sufficient details and of reasonable durations to properly describe and manage all

phases of the Work. The PgM will review the impacts of the project schedules and cash flow prior to recommending concept reports for approval.

## **5.3 Program Development and Monitoring**

### **5.3.1 Cost Estimate Reviews**

For GDOT Let projects, the EOR is required to prepare the project cost estimate using Trns•port CES®, and submit it to the PgM at each project milestone (at a minimum annually) or as necessary when the project cost significantly changes. The project PM will set up the CES® Estimate in the system. The PgM will review estimates for compliance with the established project budget and coordinate scope changes and project contingencies with the EOR. The PgM will ensure that estimates accommodate administrative, testing, Construction Engineering & Inspection (CEI) services and other appropriate costs.

Prior to each project submittal, the PgM will review the CES® estimate for accuracy.

### **5.3.2 Value Engineering (VE)**

Formal VE studies are not required on 100% TIA funded projects. However, there is a value component involved with all TIA projects.

## **6 Risk Management**

### **6.1 Risk Management Activities**

Risk management supports a proactive approach to decision making in the project through identification, analyses, and responses to project risks. It promotes quantification of project uncertainty, and includes maximizing the results of positive events and minimizing the consequences of adverse events.

The Program's risk management policies are based on the "Practice Standard for Project Risk Management" published in 2009 by the Project Management Institute, and International Standard ISO 31000:2009 titled "Risk management – Principles and guidelines."

As the Program has, and continues, to evolve, the project and programmatic risk profiles will change. The PgM's approach to risk management is to perform risk assessments of the projects and the Program, quantify risk at the project, region and program level, incorporate awareness of project risk exposure on the cash flow and its potential consequences, actively employ risk mitigation measures in the management of the Program, report on the major risk issues to GDOT management, track progress of risk mitigation efforts, and incorporate lessons learned from previous risk assessments continuously throughout the Program.

## **7 Procurement Activities**

Procurement activities for TIA will consist of procurement of professional (including CEI) services, construction contract bidding, and other miscellaneous procurements that may be accomplished by bidding or other procurement methods.

### **7.1 Professional Services Procurement**

GDOT procured professional services must adhere to all applicable State laws. Locally procured professional services must adhere to the procurement laws and regulations of the Local Government.

### **7.2 Construction Contract Bidding**

#### **7.2.1 Letting**

For GDOT Let projects, Construction Bidding Administration (CBA) will advertise and receive bids for projects as per normal GDOT procedures.

On Local Let projects, project sponsors will advertise and receive bids as per the sponsors' normal Letting procedures.

### 7.2.2 Bid Review

For GDOT Let Projects GDOT Policy 2425-1: Bid Evaluation defines the internal procedures used to evaluate contractor bids for construction projects in GDOT administered Lettings. GDOT will tabulate bids and review the submitted bids for irregularities including, but not limited to, unbalanced bids. GDOT will compare the apparent low bid with the Engineer's Estimate and the project construction budget to determine ability to award the project. The TIA Administrator will make a recommendation based on cash flow to GDOT whether to award, defer, or reject the apparent low bid.

For Local Let projects the Local Government is to submit bid tabs to the TIA Regional Coordinator (TRC) for review. The TRC will compare the apparent low the apparent low bid with the local government Engineer's Estimate project budget and projected cash flow to determine the ability to award each project. The TRC will make a determination and provide a Notice to Proceed (NTP) to the Local Government provided the project is compliant and funds are available. Where possible and legally permitted, the TRC will provide the Local Government an opportunity to coordinate a resolution to budget issues on a project prior to rejecting bids.

## 7.3 Other Procurements

### 7.3.1 Environmental Permitting Mitigation

For projects where wetland, stream, or stream buffer mitigation credits are required in order for the project to move ahead, the TIA PgM team will work closely with GDOT TIA Staff to identify needed credits. Upon notification of the required credits, the TIA Procurement Administrator will initiate the credit purchase(s). The purchases will be accomplished through a formal bid process. Purchases will be made from the bank(s) submitting the lowest bid. If it is determined that only a limited number of mitigation banks have the required credits, quotes will be requested from those banks and the purchase(s) will be made from the bank(s) providing the lowest quotes.

After the procurement is awarded, a purchase order will be issued to the appropriate bank(s). The bank(s) will send to the PgM an invoice, a copy of the purchase order, and a copy of the letter sent to the USACE notifying of the transfer of credits.

It is important to note that all environmental commitments including mitigation credits must be complete prior to certification of Letting.

### 7.3.2 Right of Way (ROW)

The TIA PgM team will work closely with GDOT TIA Staff to identify needed ROW services and the most appropriate procurement approach considering the time and budget constraints of the project. Upon notification of the need for ROW services, the TIA Procurement Administrator will initiate the ROW procurement(s). The procurement(s) will be accomplished through a formal bid process. Services will be acquired from the qualified ROW vendor submitting the lowest bid. If it is determined that the cost of required services will be less than the threshold requiring formal bidding, the services may be acquired by requesting quotes from a limited number of qualified vendors. In either case, the services will be awarded to the firms providing the lowest bid or quote.

### 7.3.3 Plans, Specifications, Special Provisions and Final Estimates (PS&E)

The EOR is required to develop a complete PS&E package including all of the required special provisions for the project.

The PgM will review the EOR's CES® estimate for compliance with the project budget.

On GDOT Let projects, final corrected plans will be submitted to the Office of Engineering Services (OES) as required by the [GDOT Letting Schedule](#) for processing projects.

### 7.3.4 Bid Package Development

For GDOT Let projects, the PgM team reviews the PS&E package, checks the plans, obtains all required certifications and authorizations, and then provides the completed package to CBA for advertising, bidding and award as required by the GDOT Letting.

On Local Let projects, project sponsors shall submit the complete bid package to the PgM allowing 14 days for review and approval. Upon acceptance of the bid package, the PgM will give written notification to the sponsor that the PS&E package is acceptable to bid.

## **8 Contract Administration**

### **8.1 Local Project Delivery**

#### **8.1.1 Local Delivery Application**

GDOT created a [Local Project Delivery Application](#) for Local Governments interested in delivering their own projects. The application is to be completed by the Local Government, or their authorized representative, and submitted to GDOT for approval.

#### **8.1.2 Local Delivery Agreement Hold Points**

The Local Delivery Agreement will typically contain language setting a schedule of expected milestone (hold) points that may include, but are not limited to:

1. Preliminary Engineering Activities – Concept Report Approval
2. Preliminary Engineering Activities – Field Plan Review (FPR) Approval
3. Right of Way – NTP
4. Construction – Notice to Advertise
5. Construction – NTP

No work on any phase of a project shall begin without a written NTP from GDOT to the Local Government for each of the above phases. Each NTP that is issued should contain a completion date for that phase. If unforeseen conditions are encountered and an extension of the completion date is warranted, the Local Government may request in writing an extension of the completion date for written approval by GDOT.

### **8.2 Design Contracts**

The PgM will manage the design process in order to ensure compliance with the scope, schedule, budget, and technical requirements. Refer to Section 12 - Design Management of this manual for more information on the Design Management responsibilities and requirements.

Design contract compliance is monitored throughout the duration of the contract. For design contracts, progress and payment for services are tracked by the PgM in terms of progress achieved through plan development. If a consultant is found not to be in compliance with the contract, GDOT may withhold payment and/or stipulate the work be redone.

### **8.3 Construction Contracts**

#### **8.3.1 Compliance**

For blended projects, the assigned Office Program Delivery (OPD) and District Construction personnel will administer TIA related contracts with support from the PgM.

For GDOT Let, 100% TIA funded projects; construction contract compliance is monitored throughout the construction duration. Contractor progress and payment are computed based on amount of quantity constructed for each pay item. The CM, or designated CEI provider, will verify quantity of materials used on construction and certify that materials are listed on the Qualified Product List (QPL). The CM or designated CEI provider will enter progress into Site Manager Software, which is used to generate construction invoices.

For Local Let projects, the Local Government must certify the construction for reimbursement with TIA funds.

#### **8.3.2 National Pollutant Discharge Elimination System (NPDES) Fees**

NPDES fees are paid each month to the EPD of the Georgia Department of Natural Resources (GDNR) for land disturbed as a result of projects awarded by GDOT. The fees are based on the amount of disturbed acreage.

For GDOT Let Projects CBA staff will process the NPDES fees and the PgM will review, process, and approve them for payment.

## 8.4 Supplemental Agreements

Supplemental Agreements may be initiated by the Local Government, Designer, DC, Contractor, PgM or GDOT.

Supplemental Agreements must be approved by the PgM and GDOT for conformance with the project budget and scope of services regardless of Letting responsibility. All changes in contract amount due to Supplemental Agreements must be reviewed and approved by the PgM and GDOT to ensure compliance with project budget.

# 9 Environmental Management

## 9.1 Environmental Policy

GDOT and the PgM recognize that implementing the projects within this TIA Program may affect the natural, social, and/or human environment. GDOT and the PgM are committed to identifying and documenting environmental resources, obtaining applicable permits and authorizations, and avoiding/minimizing/mitigating impacts where possible as associated with program activities or works.

The TIA projects are required to follow an environmental process commensurate with the sources of funding, potential environmental impacts, and jurisdiction of Federal and State agencies. The environmental process is a multi-disciplinary effort that often requires consultation with a number of agencies and involvement with the public.

## 9.2 Environmental Objectives of the TIA Program

All works for the Program shall seek to enhance the built environment and, during construction, to avoid/minimize/mitigate environmental impacts by:

- Ensuring the design and construction of the projects is undertaken in an environmentally responsible manner and in full compliance with the provisions of the relevant environmental statutory requirements
- Identifying environmental resources, documenting, avoidance/minimization measures, and mitigating environmental impacts
- Committing resources to comply with the requirements, as presented in this TIA Manual

### 9.2.1 Project-Specific Environmental Compliance

Environmental impacts associated with TIA projects may require the involvement of local, State and Federal agencies through approvals or permit obtainment. Examples may include, but are not limited to, impacts to vegetative buffers of State Waters (Buffer Variance [BV] application approvals from the EPD), impacts to Waters of the U.S. Section 404 of the Clean Water Act Permit approval from the USACE), and impacts to State and/or Federal protected species (coordination with the GDNR Wildlife Resources Division [WRD] and U.S. Fish and Wildlife Service [USFWS] respectively), and impacts to historic and archaeological resources (coordination with appropriate agencies).

The funding type, Letting responsibility, and location of the project (on or off the GDOT State Route system) are important in the determination of environmental documentation requirements (see Figure 9-1 TIA Environmental Flowchart).

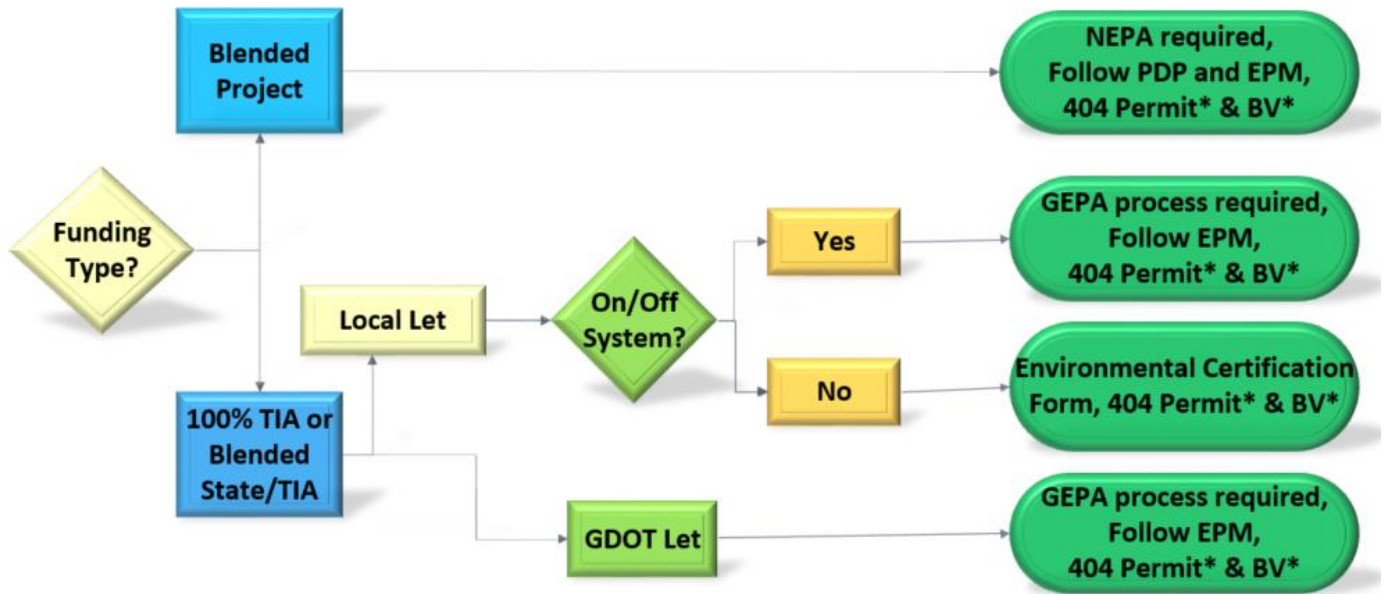

Figure 9-1 TIA Environmental Flowchart

- Projects that use Federal funds or have a Federal nexus (e.g., 404 permit) fall under Federal jurisdiction and are generally required to comply with National Environmental Policy Act (NEPA) and follow the Environmental Procedures Manual (EPM). These blended projects that include Federal money shall be coordinated through Office of Environmental Services (OES) and follow with FHWA approvals.
- Projects that use State funds and TIA funds and are GDOT Let are required to follow the EPM and shall be coordinated through the TIA office. The TIA PgM functions as GDOT OES for these projects.
- Projects that are 100% TIA funded and GDOT Let are required to follow the EPM and shall be coordinated through the TIA Office. The TIA PgM functions as GDOT OES for these projects. Projects that are 100% TIA funded and that are GDOT Let are required to follow the Georgia Environmental Policy Act (GEPA) process. The preparation of all environmental studies, GEPA documents (if project exceeds \$100 M), and applicable permits must comply with the procedures outlined in the GDOT EPM. The consultant will prepare all applicable environmental studies for the review and approval by the PgM and the GDOT TIA Administrator. The PgM will review all environmental applications prior to transmittal to the applicable resource agency. Additionally, the PgM will facilitate the purchase of all Section 404 Permit and/or BV mitigation credits on behalf of GDOT. For GDOT Let projects all pre-construction environmental commitments must be obtained in order for the PgM to complete the environmental certification for Let (at least 11 weeks prior to the GDOT Let date). For projects that require a 404 Permit and/or BV, "Final Plans" must be submitted to TIA PgM and discussion of schedule and status of "Final Plans" should be conducted approximately 9 months before Letting for 404 permits and BV applications to be prepared by the consultant, reviewed by the PgM, and transmitted to agencies for authorization. "Final Plans" are Plans to which there can be no changes to impacts of the Waters of the US or State protected buffers once submittal is made.
- Projects that are 100% TIA and Local Let and on a State route are required to follow the EPM and shall be coordinated through the TIA office. For Locally Let projects that occur on a GDOT State Route, it is the local sponsor's responsibility to submit all necessary local, State and Federal environmental permits in accordance with the GDOT EPM to the TIA PgM for review. It is the responsibility of sponsors of Locally Let projects that occur on a

GDOT State Route to implement appropriate construction monitoring activities to avoid environmental non-compliance.

- Projects that are 100% TIA and Local Let and not on a State route are required to provide the environmental certification form and any permits/variances would be obtained through the local government sponsor. For Locally Let projects that do not occur on a GDOT State Route, the sponsor or the sponsor's duly authorized representative shall complete the [Environmental Certification Form](#), which certifies that compliance with applicable Local, State, and Federal environmental requirements.
- If a 100% TIA funded project shares common termini with a Federal funded project, then consultation with the GDOT TIA PgM is required to determine if NEPA must be followed to protect the environmental decision of the adjacent project. In cases where an interchange is involved, there could be a Federal action, and consultation with PgM is needed to ensure the appropriate process is followed. GDOT EPM describes in detail the policies and procedures of the Federal and State environmental processes.

Of note, projects that require a Section 404 of the Clean Water Act permit result in the project's compliance with Section 106 of the National Historic Preservation Act (NHPA).

### 9.2.2 Environmental Strategy

An initial screening and project background research should be conducted as early as possible to determine the potential for environmental impacts.

The preparation of environmental deliverables is one step in a series of approvals for a project to achieve construction authorization. Early coordination with parties that have jurisdiction over the project will help clarify requirements and avoid unnecessary delays. Early coordination is the responsibility of the consultant team and does not require consultation with PgM. The responsible party tasked with completion of the project's Environmental Deliverables should identify critical path activities or risks in the schedule and manage these activities to expedite the delivery of the Environmental Documentation for environmental processes associated with the applicable GEPA, NEPA, and environmental permitting and approval processes. There are a variety of environmental deliverables that projects may require depending upon the funding source, Letting authority, and occurrence on or off the GDOT State Route system. An environmental justice screening would not be required for these projects.

Efficiencies in the process should be considered and may include, but are not limited to initiating ROW acquisition concurrently with the local environmental process to expedite project delivery. Elements of risk are inherent in allowing concurrent activities rather than the typical sequential activities; however, these risks must be identified and actively managed by the project sponsor.

Consultants performing environmental surveys on the TIA Program shall carry a current copy of the Field Survey Right of Entry letter at all times during field work. During field work this letter shall be provided to property owners whose property could be accessed by field personnel within the project study limits. The Right of Entry letter should be mailed out in advance of the field work.

GDOT's TIA Office will have oversight responsibility for construction projects Let by GDOT. It is the responsibility of the PgM to ensure compliance with environmental commitments and NPDES permit requirements.

## 9.3 Environmental Responsibilities Overview

### 9.3.1 Permitting

Local, State, and Federal projects, regardless of Letting responsibility, are required to coordinate, as applicable, with the TIA PgM and EPD regarding the NPDES permit requirements and to obtain BV encroachment approval for vegetative buffer impacts to Waters of the State and purchase associated mitigation credits, and the USACE to obtain the

appropriate Section 404 Permit for impacts to Waters of the U.S. and purchase associated mitigation credits. The TIA PgM will serve as the point of contact for the agencies.

If the project is Locally Let and not on a State Route, then the project sponsor is the applicant for all applicable Federal and State permits and approvals (e.g., BV, Section 404 Permit, etc.) and will purchase the appropriate mitigation credits. Refer to Figure 9-1 for other scenarios.

For GDOT Let projects that are 100% TIA funded and Local Let on a State Route:

1. The project environmental consultant will prepare and obtain Section 404 Permits and/or BV applications
2. The PgM will review all Section 404 Permit and BV applications prior to transmittal to the applicable regulatory agency
3. The PgM will facilitate the purchase of all Section 404 Permit and/or BV mitigation credits.
4. The applicant will be the TIA Office, specifically the TIA Administrator.

It should be noted that the Section 404 permit is a Federal action. Federal laws commonly encountered for TIA projects include: Section 7 of the Endangered Species Act which requires documentation for threatened and endangered species and Section 106 of the NHPA which requires documentation of the archaeological and historic resources within the project's study area. For GDOT Let projects, any Tribal consultation will be coordinated through GDOT OES through the PgM. The PgM will track the status of obtainment of applicable environmental permits and approvals relative to the project Letting schedule.

The responsible party for completion of the project's Environmental Deliverables shall have the experience and/or GDOT pre-qualifications, or retain the experience and area class qualifications necessary to complete Local, State and Federal processes to ensure that applicable environmental requirements are being met. It is important to recognize the context within which the project resides to identify required documentation. For instance, projects that cross Federal jurisdictions or have Federal funding are required to provide documentation under the NEPA process (i.e., CE, EA/FONSI, EIS/ROD) through OES since the project falls within the Federal jurisdictional boundaries.

### 9.3.2 Borrow/Waste/Stockpile Sites

For 100% TIA projects, if it is determined that project requires the use of a borrow/waste/stockpile sites for the placement of construction materials (i.e., soil cement base, sand clay base, base, etc.), or disposal of excess material, common fill, and inert waste, the Letting authority determines the process by which sites achieve environmental clearance by the local sponsor or by GDOT and the TIA CM.

For Locally Let projects, the local sponsor shall provide confirmation to the TIA CM indicating that environmental clearance work has been completed and no significant environmental resources (i.e., waters of the U.S., State waters, cultural resources, and protected species) would be affected. This confirmation can be achieved by a letter or copy of report documentation from the local sponsor. In addition, Locally Let projects must comply with all state laws regarding the disposal of waste and should provide in writing the environmental clearance documentation required by the state to the TIA PgM.

For GDOT Let projects, the GDOT Contractor or the TIA PgM shall be responsible to obtain environmental approval to use an area for a borrow/waste/stockpile site. Also, it shall be the responsibility of the GDOT Contractor to submit material source approval for a borrow/waste/stockpile site. The GDOT Contractor shall submit a letter of release from the property owner to the CM for the borrow/waste/stockpile site. It is the responsibility of the contractor to obtain all local, State, and Federal permits and approvals.

### 9.3.3 Summary of Protocols

- Electronic documents are preferred for all submittals. Please submit all Environmental documents to the TIA Environmental Coordinator and cc the TIA PM on correspondence. If the file can be emailed, please do so. If the file size is greater than the 8+ MB size, please use AECOM WeTransfer (<https://aecom.wetransfer.com>) or save

the document to the GDOT Secure File Transfer Protocol (SFTP) and email the TIA PgM Environmental Coordinator regarding the submittal. For blended projects, please follow the EPM transmittal process through OES.

- If there is any question about TIA process/protocols, please don't hesitate to reach out to the TIA PgM. TIA PgM is open to suggestions that can streamline the process.
- Agency consultation is primarily conducted through the TIA PgM. Document submittals are handled through TIA (including buffer variances, 404 permits, etc.). If site visits are being requested, please discuss with TIA PgM first and ensure that the TIA PgM is included on correspondence. The objective is for a single point of contact between the agency and GDOT to be consistent with other agency relationships GDOT has.
- Early Coordination Letters- requests from DNR/USFWS for 3 mile occurrences can be sent without PgM review or cc. For GEPA Notification Letters (see below under Cultural Resources). Other early coordination can be discussed with the Prime about the best approach. There is no prescriptive approach to early coordination.
- [Prime Verification-Similar to submittals to GDOT OES under guidance provided by the Chief Engineer on 12/16/15](#), please ensure that coordination has been conducted with the Prime.
- Cultural Resources GEPA Notification Letter – Please work with TIA PgM for guidance.
- For all coordination and submittals, the TIA PM shall be included in any communications.

#### 9.3.4 GEPA

As of July 1, 2016, the Georgia Environmental Policy Act (GEPA) was modified such that when an improvement to a public road or airport does not exceed \$100 million in costs, such actions do not require a GEPA document. That being said, resource identification and documentation of avoidance and minimization is part of the environmental process and procedures outlined in the EPM are followed.

#### 9.4 Environmental Compliance

GDOT's Environmental Compliance Bureau (ECB) will have oversight responsibility for all projects Let by GDOT. It is the responsibility of the PgM to ensure compliance with environmental commitments and NPDES permit requirements. The TIA PgM works closely with the ECB regarding pre, during, and post- construction commitments to ensure these commitments are done at the appropriate time.

### 10 Utility and Railroad Coordination

Existing utilities may be located within or in the vicinity of the existing or proposed ROW of TIA projects, some pursuant to statutory rights or written permission and some pursuant to property rights. Existing utilities may require relocation or adjustment in order to accommodate TIA projects. This Chapter establishes procedures and requirements for utility relocations, including such processes as coordination with utility owners, preliminary engineering, construction and other activities necessary for utility relocations, and the required documentation.

Utility coordination shall be considered an integral part of TIA project development. As budgets are fixed and scope defined, effective coordination, communication, cooperation, and commitment between GDOT, PgM, TIA Utility Engineer (TIAUE), utility owners, Georgia Utility Coordinating Council (GUCC), Georgia Utilities Protection Center (UPC/811), District Utility Engineers (DUE), railroads, municipalities, counties, contractors, and consultants are the key to successful delivery. The design team shall make every effort to study utility impacts early on in project development and provide the most cost effective solutions.

All existing policies and procedures governing railroads and railroad coordination will be used for TIA projects.

#### 10.1 Utility Accommodation Standards

GDOT policies and procedures for utility relocation and coordination are defined in the [GDOT Utility Accommodation Policy and Standards Manual \(UAM\)](#), current edition. All Utilities, whether privately or publicly owned, will be required to

comply with the policies and standards of the UAM when occupying or crossing any part of the ROW of the State Highway System.

There may be circumstances where some variances to the GDOT UAM may be considered to accommodate the utility owners, GDOT, counties, municipalities, contractors, property owners, locally impacted businesses, or potentially affected third parties. Variances will be addressed on a case by case basis. TIA utility special provisions will be required to cover any approved variances. All variances from the GDOT UAM must be approved by GDOT's State Utilities Office for blended projects, and recommended for approval by the PgM to the TIA Administrator for 100% TIA funded projects prior to implementation.

## 10.2 Responsibilities

The roles and responsibilities related to utility certification on TIA projects are outlined in the following sections:

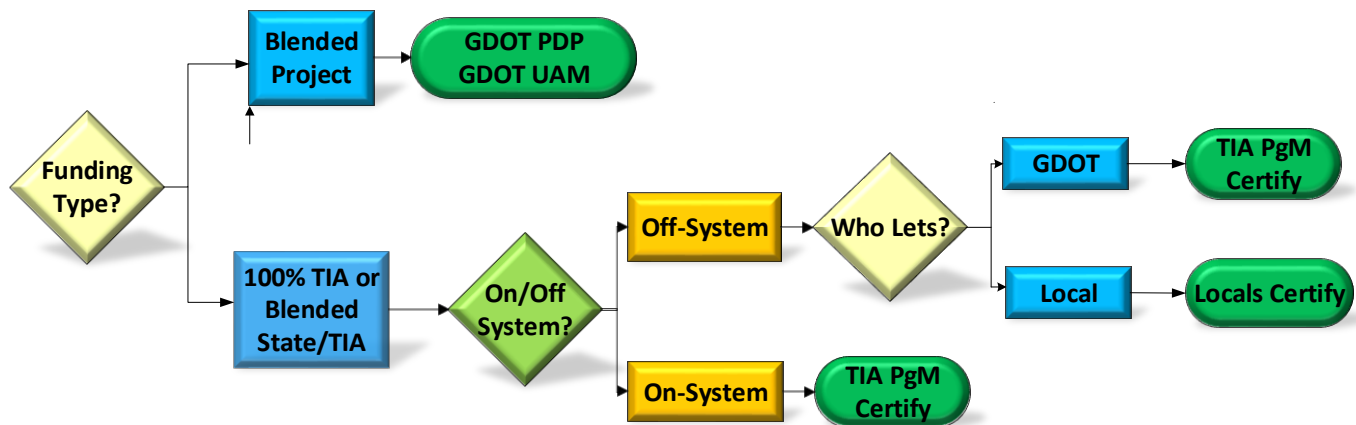

Figure 10-1 TIA Utility Responsibility Workflow

The TIAUE will provide guidance and oversight to the project consultants and contractors in accomplishing Utility Coordination from Project Concept to project closeout. The PgM will coordinate, provide direction, and assist the contractor, railroads and the utility owners in the Utility Coordination process.

### 10.2.1 Blended Projects

The GDOT Utilities Office will manage the utility relocation process for blended projects that have federal funds. Utility coordination, and work will follow the [GDOT PDP](#) and comply with the policies and standards set forth in the UAM.

- TIA/Federal Funds – follow the GDOT UAM and coordination will be through the district.
- TIA/State/Local Funds – follow the GDOT UAM and coordination will be through the TIAUE.

### 10.2.2 100% TIA Funded Projects

The TIAUE will serve in the role of GDOT's District Utilities Engineer as outlined in the GDOT UAM.

For On-System projects (Local Let or GDOT Let), utility coordination and work will comply with the policies and standards set forth in GDOT UAM.

For Off-System projects Let by the Local Government, utility coordination and work will comply with the Local Government's policies and procedures. For Off-System projects Let by GDOT, the TIAUE will provide certification of utilities.

## 10.3 Identification of Utilities and Notification of Utility Companies

Utilities are identified through field surveys, topographic surveys, coordination with utility companies, and subsurface investigations using Subsurface Utility Engineering (SUE) methods. The EOR incorporates utility location data into its base

drawings. The TIAUE will submit a request to Georgia 811 for a list of utilities specific to a given project once the consultant has been given NTP and conceptual plans are underway.

### 10.3.1 Direct Communication with Utility Companies

The EOR will obtain a list of utility companies in the vicinity of a project prior to the beginning of design with the assistance of the TIAUE.

Once conceptual design is complete, the EOR will make two (2) submittals on consultants' letterhead to utility companies:

1. Utility 1<sup>st</sup> Submission: Base plans will be provided to the utility owners as confirmed by the TIAUE/Georgia 811 Locate Request. Utility owners shall then verify locations of the existing facilities located within the project limits and general vicinity of the project, providing marked plans to the EOR. Utility 1<sup>st</sup> submission requirements shall be detailed in a letter provided to each utility owner ([1<sup>st</sup> Submission Letter](#)). Submission deadlines shall be coordinated and confirmed by the TIAUE prior to submission to utility owners.
  - a. Utility 1<sup>st</sup> Submission – SUE: For those projects determined to require SUE, the EOR will submit preliminary plans to utility owners, requesting verification of existing facilities. This request shall be considered Utility 1<sup>st</sup> Submission and should follow the SUE submittal as outlined in Section 4.1.C.1.a in the UAM.
2. Utility 2<sup>nd</sup> Submission: As project design proceeds, preliminary plans will be provided to the established utility owners, requesting further verification of existing facilities as well as marked relocation plans for facilities in conflict. Requirements shall be detailed in a letter provided to utility owners ([2<sup>nd</sup> Submission Letter](#)). Submission deadlines shall be coordinated and confirmed by the TIAUE prior to submission to utility owners.

The consultant shall maintain a Utility Tracking Report to document submission of plans to utility owners. This information shall be submitted to the TIAUE at each milestone (existing facilities submission, proposed facilities submission, etc.). Additional submittals of the Utility Tracking Report may be requested by the TIAUE, if necessary, due to changes in the project schedule or scope of utility relocation.

The consultant will copy the TIAUE on all correspondence with any railroad or utility company. Correspondence shall be submitted with the Utility Tracking Report.

### 10.3.2 Subsurface Utility Engineering (SUE) Services

For projects with 100% TIA funding, the PgM will determine if SUE is needed for GDOT Let projects.

### 10.3.3 Utility Permitting

For projects on or connecting to State routes, each utility owner on a TIA project will be required to submit a relocation permit in Georgia Utility Permitting System (GUPS) and the District Utility Engineer (DUE) for that district shall approve each permit prior to the certification of utilities. The TIAUE shall coordinate with the DUE to ensure that the GUPS Permit Submittal meets the requirements for approval as outlined in the UAM. The TIAUE shall review permits and provide concurrence for approval to the DUE.

## 10.4 Certification of Utilities

For 100% TIA funded projects that are GDOT Let or On-System, the design procedures will follow the GDOT UAM and the TIAUE will function as both the District and State Utilities Engineer:

- 100% TIA GDOT Let (On-System or Off-System) shall be certified by the TIAUE.
- 100% TIA Local Let On-System shall be jointly certified by the Local Sponsor and TIAUE ([Certification Letter](#)).
- Blended projects shall be certified by the DUE.

Therefore, the TIAUE will complete the Utilities Certification which certifies that all utility conflicts have been identified and resolved and identifies any payment obligation GDOT may have for utility related costs on the project.

For 100% TIA funded Off-System projects the sponsor or the sponsor's duly authorized representative shall complete the [Local Utilities Certification](#).

### **10.5 Utility Relocation Work and Construction Schedules**

Utility companies are required to attend the pre-construction conference and to coordinate the construction schedule directly with GDOT's Contractor. The contractor will work closely with the utility company throughout construction maintaining detailed records of utility coordination efforts. The contractor shall, at a minimum, hold monthly utility coordination meetings. Frequency of utility coordination meeting shall be determined based on project scope and utility involvement, and shall be approved by the CM and CEI staff. During construction, the CM or designated CEI staff shall monitor utility relocation progress, attend/hold coordination meetings, and confirm that utility construction fulfills the Memorandum of Understanding (MOU) and contract requirements. Utility relocation construction schedules shall follow the approved Utility Adjustment Schedules provided with approved GUPS permit applications. Utility owners shall follow this schedule for all construction activities located within the project limits. Any deviation from the approved UAS shall require coordination with the TIAUE and revision to the approved permits. All permit revisions shall be processed in accordance with the GDOT UAM.

### **10.6 Utility Relocations/Coordination during Construction**

The PgM and the EOR will coordinate with Utility and Railroad Owners before project certification to determine conflicts, necessary relocations, utility adjustment schedules, and issuance of the GUPS permits. It is common for utilities to be unexpectedly encountered during construction. If this occurs, the contractor will notify the CM and initiate coordination to identify and coordinate relocation of the newly discovered utility.

### **10.7 Utility Reimbursement**

TIA procedures for reimbursement shall follow those outlined in Section 4.2 of the GDOT UAM and shall be accomplished via direct coordination with the TIAUE.

Reimbursements for utility relocations are determined and negotiated prior to construction Letting. The negotiated amount of reimbursement may require a Force Account Agreement between GDOT and the utility company.

### **10.8 Utility and Railroad Owner Meetings and Correspondence**

The TIAUE will be responsible for assisting the Consultant in identifying utility owners, tracking plan submissions, scheduling and inviting utility owners to the FPR meetings, holding other coordination meetings, as needed, and otherwise communicating with Utility and Railroad Owners as necessary to timely accomplish any required Utility Relocations on GDOT Let projects.

At least ten calendar days in advance of each scheduled project utility and railroad meeting, the PgM shall provide written notice and an agenda for the meetings with the appropriate Utility and Railroad Owner. The PgM shall prepare and distribute minutes via US mail and/or electronic mail of all meetings within seven days after the date of the meeting with Utility and Railroad Owners and shall keep copies of all correspondence between PgM and any Utility and Railroad Owner.

### **10.9 Record Keeping**

The PgM shall ensure that utility construction and inspection records are maintained in order to ascertain that Utility Relocation Work is accomplished in accordance with the terms and in the manner proposed on the approved Utility Work Plan and the applicable Utility Agreement.

Documentation forms currently used by GDOT, counties and municipalities will be used for utility relocation whenever possible. When new documentation forms, such as a variance, are required, approval will be required from the relevant governmental agency and GDOT State Utilities Office. Utility owners will be notified in writing within ten calendar days prior to any documentation form changes and its respective implementation.

## 11 Right-of-Way Management (ROW)

### 11.1 General Acquisition Requirements

Titles 32 and 22 of the O.C.G.A. shall be used for all ROW acquisition regardless of who acquires the ROW for the TIA projects.

No separate funding authorization is required to begin ROW acquisition for 100% TIA funded projects.

ROW acquisition can proceed at-risk without environmental approval.

Reimbursements to Local Governments for property acquisitions and payments to property owners will be paid out of TIA funds in accordance with the Local Agreement.

For all GDOT acquired parcels, reviews and approvals noted in the [GDOT ROW Manual](#) designated to be completed by GDOT ROW Office staff will be completed or coordinated by the PgM.

For parcels that are On-System or adjacent to an On-System route, regardless of who acquires the ROW, all consultant acquisitions must be performed by GDOT prequalified ROW consultants for each level of work being performed during the acquisition process. Additionally, all appraisals and appraisal reviews must be conducted by an independent appraiser, pre-qualified by GDOT.

### 11.2 Responsibilities

For 100% TIA funded, or TIA blend with state funded projects that are GDOT Let or are Local Let, **On-System (or parcels that are adjacent to On-System route)**, GDOT's ROW Office has delegated the authority to the PgM to manage ROW. The State TIA Administrator has contractually delegated the management of those acquisitions to the PgM who is responsible for:

- Ensuring that all acquisitions are in accordance with state laws and any applicable federal laws
- Reviewing and approving ROW plans
- Reviewing preliminary cost estimate to establish a ROW budget and ensuring the project scope and cost are within budget
- Approving any proposed financial transaction associated with the acquisition of ROW
- Certifying for each project all ROW has been acquired, or a plan for acquisition is in place that will not impact the construction schedule
- Verifying ROW stipulations between Local Governments and property owners are included in the construction contract
- Coordinating the submittal of approved ROW plans
- Preparing deeds and closing documents as needed
- Ensuring GDOT project management software used to track the ROW acquisition process is current
- Overseeing the ROW acquisition being performed by the ROW consultant on the behalf of TIA

For 100% TIA funded, or TIA blend with state funded projects that are **Off-System** and Local Let:

The Local Government is responsible for:

- Ensuring that all acquisitions are in accordance with state laws and any applicable federal laws (i.e. appraisal review)
- Reviewing and approving ROW plans
- Preparing preliminary ROW cost estimate to ensure ROW cost is within budget
- Preparing detailed ROW cost estimate when using for NFS (refer to 11.5)
- Certifying for each project all ROW has been acquired; or a plan for acquisition is in place that will not impact the construction schedule

- Verifying ROW stipulations between Local Governments and property owners are included in the construction contract
- Preparing deeds and closing documents as needed
- Providing [ROW certification](#) to PgM prior to construction Let in accordance with Section 11.4.

The PgM is responsible for:

- Reviewing preliminary cost estimate
- Approving reimbursement invoices associated with the acquisition of ROW on a 100% TIA, or TIA blend with state funded project for compliance with TIA legislation.
- Auditing as necessary

### 11.3 GDOT ROW Acquisition Management

For GDOT Let or Local On-System or adjacent to On-System the EOR will provide the necessary information for PgM to complete [Preliminary ROW Cost Estimate](#) (see Figure 11-1) for the project. The PgM will review and validate the cost estimate at the concept report submission and prior to ROW plan approval.

A GDOT approved appraiser will generate the detailed ROW cost estimate. The TIA review appraiser will approve the detailed ROW cost estimate.

### 11.4 Local ROW Acquisition

Local ROW acquisition is eligible for reimbursement for both administrative and real property value up to amount budgeted.

The administrative costs associated with the acquisition of ROW and the real property costs are eligible for reimbursement by the TIA Program. Local Governments must provide a [Preliminary ROW Cost Estimate](#) to the PgM for approval, at a level of detail sufficient to justify the project ROW costs, prior to issuance of a NTP. Budgets for ROW cost will be agreed to by GDOT and the Local Governments through a Local Agreement. If ROW costs are found to be in excess of the budgeted amount, coordination between the Local Government and the PgM is necessary to determine the impacts to the project. ROW costs that exceed the amount agreed upon in the Local Agreement, and deemed necessary to complete the project, may be the responsibility of the Local Government.

The Local Government or its pre-qualified ROW consultant will establish a preliminary ROW cost estimate for the project and ensure ROW acquisition costs are within the project budget. At a minimum, the information contained in the TIA [Preliminary ROW Cost Estimate](#) must be provided to the PgM and used to verify that the projected costs are within the project budget.

Consultants who contract with the Local Governments to acquire ROW can establish the Market Value for the real property based on the approved detailed ROW cost estimate. TIA projects that cross county lines with ROW acquisition will require a Local Agreement for acquisition services with each county acquiring the ROW.

The Local Governments must certify ROW with the [Right of Way Certification](#) form. This is a condition precedent to reimbursement of ROW costs.

### 11.5 Abbreviated Valuation Methods

Abbreviated Valuation Methods may be used in compliance with procedures outlined in GDOT ROW Manual. Deviation from these procedures is granted for the monetary threshold. The monetary threshold is limited to \$50,000 and is only allowed for properties that do not suffer any damages. This is an amendment to the values established in the GDOT ROW Manual. All other procedures must be followed.

## 11.6 Condemnation

For On-System projects where the ROW is to be acquired in the name of GDOT, a Special Assistant Attorney General (SAAG) is required for all condemnation proceedings. If it is determined that SAAG services are needed, the PgM will submit a request for assignment of a SAAG to a project through the Office of Right of Way Funding and Certifications. This request must include Project Number, PI Number, and charging information for the SAAG billing.

## 12 Design Management

### 12.1 Concept Reports

The Concept Report is a record of the defined scope of work to be delivered for the project. The scope of the project shall meet the stated benefit described in the Special District's Approved Investment Lists and must be clearly stated in the Concept Report. With the exception of minor projects, Concept Reports shall be completed and approved for all TIA funded projects at the discretion of the PgM. GDOT's Chief Engineer & Director of Engineering must approve the Concept Report before a project can be advanced to preliminary plans phase. Technical content and assurance that the concept meets the projects stated benefit is the responsibility of the PgM.

#### 12.1.1 Blended Projects

Concept Reports for blended projects that include federal funds will follow the processes and templates defined by the latest [GDOT PDP manual](#).

#### 12.1.2 100% TIA Funded projects

[TIA Concept Report](#) for 100% TIA funded projects will be circulated to GDOT and local sponsors. For 100% TIA funded projects, Concept Team Meetings will be scheduled at the discretion of the PgM and may not be required based on the PgM's recommendation and acceptance by GDOT. Approval of Concept Report shall constitute Location & Design (L&D) approval. The TIA PM shall notify and provide the District personnel with the approved concept report and layouts for display in the Area Office.

#### 12.1.3 Location and Design (L&D)

Within 30 days of L&D approval, a Notice of L&D advertisement shall be made in the local newspaper of each county in which the project is located. At the discretion of the PgM, notice of L&D advertisement may also be made in the local Legal Organ if covered by multiple counties. Advertisements shall run once per week for four consecutive weeks.

#### 12.1.4 Concept Revisions

Any changes to the original approved Concept Report for 100% TIA funded projects shall be summarized in a technical memorandum. This technical memorandum shall be included with the original approved Concept Report and will serve as a Revised Concept Report. Revised Concept Reports require PgM concurrence and GDOT's approval.

### 12.2 Roadway Design

Unless otherwise determined by the TIA Office during project development, roadway design as part of a blended project that requires future federal funding is required to follow the [GDOT PDP manual](#) and all policies, procedures, and manuals required by GDOT.

Roadway design as part of a 100% TIA funded project is required to follow the TIA Manual. Project Design Teams should note that all funds for 100% TIA Projects are authorized at Project Kickoff. Therefore, every effort should be made to ensure ROW acquisition can begin as soon as possible. For these projects, ROW acquisition is not contingent on environmental acceptance.

#### 12.2.1 Roadway Design Specifications

For 100% TIA funded projects that are On-System, roadway projects shall be designed in accordance with the policies, guidelines, and standards published and referenced in the [GDOT Design Policy Manual \(DPM\)](#), the design criteria published in the American Association of State Highway and Transportation Officials (AASHTO) AASHTO-A Policy on

Geometric Design of Highways and Streets and AASHTO-A Policy on Design Standards Interstate System, the guidelines and standards published by the FHWA, and the Manual on Uniform Traffic Control Devices (MUTCD).

Current GDOT Standard Specifications for the Construction of Transportation Systems (as supplemented by the Supplemental Specification Book, Special Provisions, Supplemental Specifications, GDOT Standards, and Construction Details) will be used in the design and construction of On-System projects.

For 100% TIA funded projects that are Off-System, and are Local Let, the Local Government will determine the roadway design criteria. The following are suggested minimum standards for roadway design:

- For  $ADT > 400$ , AASHTO: A Policy on Geometric Design of Highways and Streets
- For  $ADT \leq 400$ , AASHTO: Guidelines for Geometric Design of Very Low-Volume Local Roads

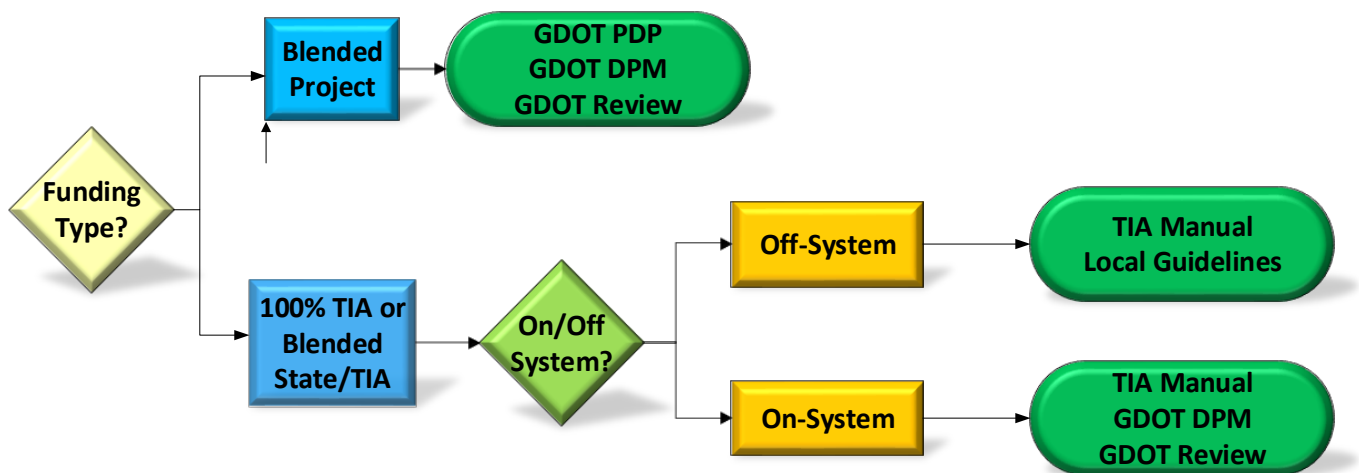

Figure 12-1 TIA Roadway Design Guidance

## 12.3 Responsibilities

The roles and responsibilities of the EOR and Local Government related to roadway design of TIA projects are outlined in the following sections.

### 12.3.1 Engineer-of-Record

The EOR is responsible for all aspects of design, plan development, and specifications related to a roadway design. Designs and plans for On-System roadways shall follow the DPM. Every design must be certified (signed and sealed) by a licensed engineer registered in Georgia.

Engineering firms providing design work for On-System roadways are to be prequalified with GDOT area classes necessary for the project.

The EOR is responsible for ensuring that roadway designs are complete, accurate, and constructible. Construction plans should be of sufficient quality to ensure that the contractor can easily understand the design and how the roadway is to be constructed. If errors occur during construction due to errors on the roadway plans, the EOR is responsible to provide a remedy at no additional cost to the project. The EOR may be held responsible for covering the additional contractor costs, liquidated damages or legal claims as a result of errors and/or omissions in the plans.

#### 12.3.1.1 Local Government

For Off-System roadways, the Local Government shall submit plans and specifications to the PgM for review before Letting the project.

#### 12.3.1.2 Survey and Mapping

The electronic database shall be completed in accordance with the [GDOT Survey Manual](#), unless deviations are approved by the PgM or the TIA Administrator.

For all GDOT Let projects, Quality Control (QC) Check for database and cad files will be reviewed and approved by GDOT.

#### 12.3.2 Soil Survey

Soil survey(s) will be required at the discretion of the PgM.

The soil survey(s) will follow the requirements and guidance set forth in GDOT's PDP, [GDOT's Guidelines for the Geotechnical Engineering Manual](#), and by GDOT's Office of Materials and Testing Engineer.

The soil survey(s) should be coordinated and developed as soon as possible to provide safe, effective and cost-efficient recommendations for the project design. The PgM will have the authority to accept all soil surveys for Off-System projects. GDOT's Office of Materials and Testing will be responsible for providing acceptance for all On-System projects.

If there are any concrete box culverts that are new or are being completely replaced, the PgM and the EOR shall determine if a Culvert Foundation Investigation is to be performed as part of the Soil Survey.

#### 12.3.3 Pavement Evaluation and Design

The need for a Pavement Evaluation will be determined by the TIA Office for all GDOT Let projects.

For 100% TIA funded projects that are On-System, pavement design and evaluation submittals shall be developed in accordance with GDOT's PDP and [GDOT Pavement Design Manual](#) and reviewed and approved by the PgM.

For 100% TIA funded projects that are Off-System and Local Let, pavement evaluation and design shall follow local guidelines and recommended practices established by the Local Government. GDOT can provide pavement design recommendations and review if requested by the Local Government and agreed to by GDOT.

For 100% TIA funded projects that are Off-System and GDOT Let, pavement design will be approved by the PgM.

For On-System, the recommended pavement design life is 20 years. If a 20 year design is not achievable, the EOR should reduce/remove section thickness and/or layers from the top of the pavement structure in lieu of the base or sub-grade.

### 12.4 Municipal Separate Storm Sewer System (MS4)

All TIA funded projects must comply with the MS4 permit for those areas outlined in the [MS4](#).

### 12.5 Highway Signing and Pavement Markings

For all TIA projects, highway signing and pavement markings will be installed in accordance with the MUTCD. For On-System TIA projects, highway signing and pavement markings will also conform to the [GDOT Signing and Marking Design Guidelines](#).

### 12.6 Traffic Engineering and Operations

TIA projects that are On-System or GDOT Let, regardless of funding, will follow the GDOT processes for the installation of all traffic control devices.

Design traffic volumes may not be necessary for 100% TIA funded projects and for which the project description included a specific number of lanes. Design year volume is important and may be necessary on various project types and may be needed for other design elements.

#### 12.6.1 Roundabouts, Alternative Interchanges and Intersection Design

For 100% TIA funded projects that are On-System see GDOT DPM and State website for Modern Roundabouts.

For 100% TIA funded projects that are Off-System, the use of conventional intersection solutions that meet both the safety improvement goals and budget limitations should be considered when roundabout alternatives exceed the project budget.

All On-System projects will be reviewed by GDOT Traffic Operations.

### 12.6.2 Traffic Control Signals

Traffic control signal permits, including signal modification permits, approved by the GDOT Chief Engineer will be required for all new traffic control signals installed for On-System TIA projects only. Off-System TIA projects with new traffic control signals will follow MUTCD's requirements and will be approved by the local agencies in accordance with the MUTCD.

### 12.6.3 Intelligent Transportation Systems (ITS)

Blended projects with federal funds and locally funded projects on the State highway system will follow the GDOT PDP process for the installation of all ITS improvements. The installation of ITS improvements on TIA projects, which include local funding on Off-System highways, will follow the TIA Manual. The option of implementing minor ITS projects without construction plans will be reviewed and approved by the PgM on a case-by-case basis.

## 12.7 Bridge Design

If a project involves a bridge that carries the interstate or a bridge crossing the interstate, FHWA coordination is required and may involve submitting plans to FHWA for review.

### 12.7.1 Bridge Design Specifications

Bridges are to be designed using the most recent editions of the Georgia DOT Standard Specification - Construction of Transportation Systems, current edition, [GDOT Bridge and Structures Design Manual](#) and AASHTO Bridge Design Specifications. It is preferred that new bridges be designed using the AASHTO LRFD Bridge Design Specifications.

Blended projects with federal funds must conform to FHWA requirements.

For 100% TIA funded projects, the following are the AASHTO Bridge Design Specifications to be used for bridge design:

- Bridge Widening Projects: AASHTO Bridge Specifications or the version of the specifications in place at the time the bridge was originally designed with prior approval from GDOT Office of Bridges and Structures.
- New Off-System Bridges: AASHTO Standard Specifications for Highway Bridges, 2002, 17th Edition (HS20 Loading) as a minimum.
- New On-System Bridges: AASHTO Standard Specifications for Highway Bridges, 2002, 17th Edition (HS20 Loading) as a minimum. However, the AASHTO LRFD Bridge Design Specifications are acceptable.
- New On-System Bridges (Interstate): AASHTO LRFD Bridge Design Specifications (HL93 Loading) to accommodate full FHWA oversight.

In the event of conflicting information or guidance, the GDOT Bridge and Structures Design Manual supersedes AASHTO guidelines.

### 12.7.2 Responsibilities

The roles and responsibilities of GDOT, PgM, EOR and Local Government related to preliminary bridge design, bridge hydraulics and final bridge design of TIA projects are outlined in the following sections.

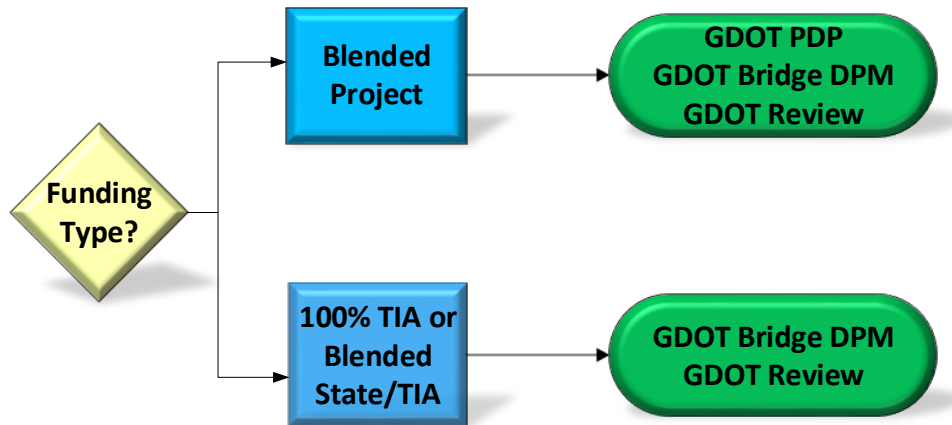

Figure 12-2 TIA Bridge Project Design Guidance

#### 12.7.2.1 GDOT Office of Bridge Design

For all bridges the GDOT Office of Bridge Design will provide the necessary submittal reviews, guidance, and design acceptance.

#### 12.7.2.2 Engineer-of-Record

The EOR is responsible for all aspects of design, plan development and specifications related to a bridge or structure design. Bridge and structure designs and plans shall follow the GDOT Bridge and Structures Design Manual. Every bridge design must be certified by a licensed engineer registered in Georgia specializing in bridge design.

All Engineering firms providing bridge and structure design work bridges are to be prequalified with GDOT in Area Classes 4.01a, 4.01b (with quality assurance from another prequalified firm), 4.02, and/or 4.04 as necessary for the project.

#### 12.7.2.3 Local Government

For Off-System bridges that are Local Let, the Local Government and the Local Government's EOR shall certify that:

- The bridge configuration meets the drainage design and stream crossing requirements of the local jurisdiction and FEMA, and creates no adverse effects to flood elevations or flood plain limits in the surrounding area.
- The bridge is designed to resist the hydraulic forces determined by the applicable design guidelines and imposed on the structure by the waterway.
- The foundations are designed to be installed below the anticipated scour depths into competent bearing material, and in accordance with the Bridge Foundation Investigations (BFI).
- The scour protection is designed to resist anticipated velocities at the crossing.

The [Local Bridge Design Certification](#) shall be submitted to the PgM before Final Acceptance of the project.

### 12.7.3 Bridge Details

The following sections outline guidelines for design and detailing of bridges that will improve safety and lower long term maintenance costs for the owner.

#### 12.7.3.1 Superstructure

Whenever possible, minimize the number of deck joints in bridge spans and locate deck joints to provide access for future maintenance and replacement.

The use of Fracture Critical Members (FCMs) is not permitted on highway bridges without written authorization from GDOT Office of Bridge Design. Design and detail FCMs to allow full access for inspection. Provide a minimum inside depth of six feet to facilitate interior inspection of box girders. To allow free flow of air during inspections, include access

openings of 3'-0" diameter minimum into all cells, and between cells of the girders. Provide outside access opening covers in areas that can be accessed without impacting traffic. Provide hinged access opening covers with hinges located on the inside of the box girder.

Timber bridges, masonry bridges and structural plate arches are not permitted for TIA projects. Intermediate hinges in bridge girders or spans are also not permitted for TIA projects.

Design bridge superstructures, joints and bearings to allow access for long-term inspection and maintenance.

#### 12.7.3.2 Bridge Foundations

Design foundations for bridges over waterways to accommodate predicted scour depths. The EOR will determine the scour potential of each bridge crossing using the BFI and H&H Study.

#### 12.7.3.3 Bridge Railing and Barriers

All barrier systems shall meet current crash test and other safety requirements as determined by GDOT. Table 12-7 lists current approved GDOT Bridge Railing Standards, which GDOT will update upon request.

BRIDGE BARRIER, PARAPET AND RAIL		
Description	Std Name	Rev Date
<b>With Sidewalks</b>		
Concrete Parapet (42" tall – 13" wide)		
Concrete Parapet (27" tall – 13" wide) w/Std 3626 (42" tall total)		
Concrete Parapet (34" tall – 13" wide ) w/Std 9031N Chain Link Wire Fence for urban area bridge over an Interstate or other limited access highway or a railroad"		
<b>No Sidewalks</b>		
Concrete Type "S" Barrier ( 42" tall)		
COMBINATION RAILS/FENCES		
Description	Std Name	Rev Date
One-Pipe Aluminum Handrail for mounting on parapets (14.75" high rail)	3626	10-64
Chain Link Wire Fence for mounting on top of parapets	9031N	06-81
Pipe Handrail for mounting on top of parapets & modified barriers	9031R	10-88
ARCHITECTURAL RAILS		
Description	Std Name	Rev Date
Texas Rail (to be used only with GDOT Bridge Office approval)		
Kansas Corral (to be used only with GDOT Bridge Office approval)		

Table 12-7 GDOT Standard Bridge Railing

#### 12.7.3.4 Hydraulic and Hydrological Studies

GDOT requires an H&H Study and Preliminary Bridge Layout to be submitted and accepted prior to advancing to the next phase, regardless of funding source. H&H Study Reports for these projects must follow the guidelines and policies in the GDOT Drainage Manual and include the Preliminary Bridge Layout in the study appendices. The [GDOT Drainage Manual](#) outlines the content and format of H&H Study Reports.

#### 12.7.3.5 Bridge Foundation Investigations (BFI)

A BFI will be required for all bridge projects regardless of the funding source. In cases where they are available for use on bridge replacement projects, existing BFIs may be used in lieu of a new BFI Report. Prior to undertaking a TIA project, an initial search shall be undertaken with GDOT's Office of Materials and Testing to determine if approved BFI Report(s) are available for use. The BFI will make all necessary recommendations for the project and will follow the format required by GDOT's Office of Materials and Testing. For On-System bridges, the BFI shall be submitted to GDOT for review and approval.

Requirements and procedures for Wall Foundation Investigation (WFI) reports shall closely follow those specified for BFIs above.

#### 12.7.4 Retaining Walls

Retaining walls will be designed according to the guidelines in the GDOT Bridge DPM. Wherever possible, the use of GDOT standard walls and contractor designed walls is encouraged. A WFI will be required for walls as recommended by the GDOT Bridge DPM.

#### 12.7.5 Bridge Condition Surveys

For On-System bridges to be widened and/or rehabilitated, the Office of Bridge Design - Bridge Maintenance Section shall complete Bridge Condition Surveys in accordance with the GDOT PDP. The PgM will obtain Bridge Condition Surveys for these projects from Office of Bridge Design - Bridge Maintenance Section. As determined eligible by the TIA Administrator, recommendations from Bridge Condition Survey reports shall be incorporated into the final design of the bridge.

#### 12.7.5 Shop Drawings and Construction Services

During construction, the EOR will provide shop drawing and Request for Information (RFI) review. GDOT will process and return shop drawings to the contractor following acceptance by the EOR. The PgM will coordinate processing of the shop drawings, RFIs and construction correspondence. All submittal related correspondence will be submitted to the PgM for distribution to appropriate review personnel.

The EOR will review shop drawings to ensure that fabrications are consistent with the designer's intent. A partial list will include, but not be limited to:

- Structural steel framing
- Precast, pre-stressed concrete beams
- Precast segmental concrete units
- Bearings
- Expansion joints
- SIP deck forms
- Sound Barriers
- Sign structures
- Signal poles
- Bridge appurtenances
- High mast lighting

Shop drawing review may be required for major items of temporary works that might affect the public, impose significant loadings on the permanent works, and/or require an engineered design. A partial list includes, but is not limited to:

- Temporary structures
- Cofferdams
- False work, shoring and formwork
- Superstructure erection
- Construction staging and traffic control
- Demolition plans

#### 12.7.5.1 As-Built Plans

As-Built Plans will be prepared for all structures on the project. This will include the as-built foundation drawings as well as the construction documents used for the structure, noting all field change corrections made to the drawings. The PgM will store As-built drawings produced from construction and transfer the final drawings to the appropriate project sponsor upon project closeout.

#### 12.7.6 Load Rating

The EOR will complete a load rating and develop a Load Rating Report for each bridge design which includes a statement certifying that the bridge has the capacity to carry the minimum design loading specified in the TIA Manual and does not require posting for current State legal loads. The Statement of Load Rating Certification will include the professional seal and signature of a registered professional engineer in the State of Georgia.

Load rating procedures outline in AASHTO's The Manual for Bridge Evaluation, current edition, shall be followed. Bridges designed using the AASHTO Standard Specifications may be rated using either Load Factor Rating (LFR) or Load and Resistance Factor Design (LRFD) methodologies. Bridges designed using the AASHTO LRFD Specifications must be rated using LRFD methodologies.

Load Rating Reports will be submitted to the PgM upon certification of final bridge plans. The PgM will submit the reports to the Office of Bridge Design for verification of load capacity and acceptance prior to project Letting. If changes occur between submittal of final plans and construction of the bridge that affect the load capacity of the bridge, it is the responsibility of the EOR to submit revised Load Rating Reports to the PgM and GDOT for rerating. A certified copy of the Load Rating Report and Final Bridge Plans will be submitted to Office of Bridge Maintenance for inclusion in the maintenance records for each bridge.

If an independent load rating, performed by GDOT, demonstrates that the capacity of the bridge design is less than 95% of the design load, the EOR will be responsible for any additional design and construction costs associated with correcting the deficiency in a manner that increases the capacity to a level that meets the design load requirements.

#### 12.7.7 Final Acceptance

For all bridge projects, all project deliverables will be in accordance with GDOT PDP and GDOT Bridge and Structures Design Manual. A partial list includes but may not be limited to:

- Design and As-Built Plans
- Load Rating Report
- H&H Studies Reports including scour calculations
- As-Built Foundation Plans
- BFI used for design
- Shop Drawings

#### 12.8 Design Exceptions/Variations (DE / DV)

For GDOT Let and On-System projects, all DEs and DVs shall be submitted and reviewed by GDOT's Office of Design Policy & Support (DP&S) regardless of funding source. It is highly encouraged that any DE/DV be discovered and introduced at

the concept stage or as early as possible. The Concept Report should identify these variations and should include them in the report for review and approval. If a DE and/or DV are to be obtained, then the format and procedures outlined in the GDOT PDP and in the GDOT DPM are to be followed.

GDOT's Chief Engineer will approve all applicable DE and DV. These DE and DV reports will be submitted to the:

- PgM for review and concurrence with copies sent to the Regional Coordinator (RC) and TIA Office
- Chief Engineer for approval following the process outlined in the GDOT DPM with copies sent to the PgM, TRC, and TIA Office

## 12.9 Field Plan Review (FPR)

The PgM is responsible for facilitating plan reviews, preparing FPR reports, reviewing FPR responses, and distributing final FPR reports. The PgM shall invite project sponsor, district representatives including district construction, traffic operations, and area engineer. FPR comments and actions shall consider impacts to scope, schedule and budget prior to implementation on a project. The Environmental documentation shall be in progress prior to the FPR, but does not have to be completed. In addition, the soil survey report, if required, should be complete prior to the FPR. Any DE and/or DV should be approved as well.

Except with the approval of the PgM, a minimum of one FPR, conducted at the preliminary plan completion level, is required for 100% TIA funded projects that are GDOT Let or are On-System. At the request of the EOR and with approval from the PgM, additional FPRs may be held for complex projects and projects that have a large number of ROW or utility impacts.

It is recommended that Local Let, Off-System major projects conduct at least one FPR. The TIA office and appropriate GDOT staff shall be invited to the FPR.

Minor projects are exempt from this requirement.

## 12.10 Airport Projects

The work and materials for airport projects shall be in strict and entire conformity with:

- Laws of the State of Georgia
- GDOT's Standard Specifications, Current Edition, and the Supplemental Specifications
- Federal Aviation Administration's Standards for Specifying Construction of Airports, dated February 17, 1989
- GDOT's Special Provision 107-1-01-SP (Legal Regulations and Responsibility to the Public)
- GDOT's Special Provision 108-1-01-SP (Prosecution and Progress)
- GDOT's Special Provision 109-1-01-SP (Measurement and Payment)
- "TERMS AND CONDITIONS OF ACCEPTING AIRPORT IMPROVEMENT PROGRAM GRANTS," dated April 13, 2012

Copies of any of these compliance documents are available from [GDOT's Aviation Programs](#) office or the Atlanta Airports District Office of the Federal Aviation Administration.

## 12.11 Lighting

The PgM will prepare lighting agreements for execution with local governments. In addition, the TRC and the PgM will perform all reviews, and approvals.

Design must be in compliance with the GDOT DPM, Chapter 14, Lighting.

## 13 Construction Administration

### 13.1 Preconstruction Conference

For GDOT Let projects, the PgM is responsible for coordinating a preconstruction conference with the contractor, CEI provider, District / Area Office, utilities, etc. after project award, but prior to beginning of construction activities. The format of the preconstruction conference will follow GDOT standards as outlined on [The Source](#).

For Local Let projects, the PgM and RC should be invited to all preconstruction conferences. The PgM reserves the right to attend or decline.

### 13.2 Construction Engineering and Inspection (CEI)

For blended projects, CEI shall be the responsibility of the District and perform in accordance with all GDOT manuals, specifications, plans, and testing requirements. GDOT Manuals include but are not limited to the [GDOT Construction Manual](#), [GDOT Bridge Manual](#), and [GDOT Sampling, Testing and Inspection Manual](#).

For GDOT Let 100% TIA projects, the scope of work for inspection will be determined by the PgM and submitted to the TIA Administrator for concurrence.

For Locally Let projects, the scope of work for inspection will be the responsibility of the Local Government, unless determined otherwise by the PgM.

### 13.3 Construction Audits

For blended projects the standard GDOT procedures will apply.

For 100% TIA projects, the PgM is responsible for conducting audits on both On-System and Off-System projects. GDOT may conduct random audits for validation.

### 13.4 Use of Site Manager/ProjectWise Software during Construction

On GDOT Let projects, Site Manager will be the software used for all daily reporting, submittals, submittal tracking, materials certifications, testing reporting, and payment estimates.

ProjectWise shall be used for project documentation on any On-System project.

### 13.5 Materials

All construction materials shall comply with current [Qualified Product List \(QPL\) requirements](#), and [GDOT Standard Specifications for the Construction of Transportation Systems](#), as supplemented by the Supplemental Specification Book, Special Provisions, Supplemental Specifications, Standards, and Details. Products and suppliers are defined on the QPL and they have a defined inspection frequency.

For GDOT Let Projects, GDOT's Office of Materials and Testing will provide all required testing in accordance with all applicable GDOT Manuals, which include, but are not limited to, the GDOT Construction Manual, GDOT Bridge Manual, and GDOT Sampling, Testing and Inspection Manual.

The CM or designated CEI provider will complete all required material certification documentation to ensure all sampling and testing is completed as required for the project. For GDOT Let, On-System projects Material Certifications are to be submitted and tracked through Site Manager. Material Certification ensures all materials used in the Work are acceptable.

For material Quality Assurance (QA) on Local Let, Off-System Projects a Material Certification Statement must be provided in support of the reimbursement of costs.

For material QA on Local Let, On-System Projects see section 13.5.1 of the TIA Manual.

### 13.5.1 Local Let Responsibilities for Material Quality Assurance of On-System Projects

For Local Let, On-System, the Local Government shall provide a consultant prequalified in Area Classes 6.04a and 6.04b to perform the Materials Testing. Local Governments shall adhere to the following process:

- Submit a [Local Let Material QA form](#) to the PgM to obtain approval of materials testers
- Ensure QPL sources are utilized and that only testing personnel with GDOT certifications perform testing on the project; all testing must be in accordance with GDOT's Sampling Testing and Inspection Manual
- Complete a quarterly Materials Certificate (MC) Checklist and submit to the PgM as required in GDOT Construction Manual; contact PgM to obtain a Checklist prior to starting work on the project
- Provide test results to the GDOT Office of Materials and Testing (OMT) and via hardcopy to the TIA CM or CEI designee
- Complete required MC Checklists and submit to the PgM as required in GDOT Construction Manual, unless otherwise determined by the PgM

## 13.6 Project Closeout

### 13.6.1 Final Inspection

For blended projects, all GDOT Let projects and Local Let, On-System projects, final inspection follows the requirements as outlined in [The Source](#) and Standard Specifications as may be modified from time to time by TIA specific policies.

For Local Let, Off-System projects, final inspection of work is the responsibility of the local sponsor.

### 13.6.2 Final Audit

For GDOT Let or On-System projects, the CM or designated CEI provider is responsible for completing the TIA CM's [Closeout Checklist Form](#) prior to requesting Final Audit. If any of the checklist items have discrepancies, they must be resolved or be in the process of being resolved before requesting a Final Audit. The CM or designated CEI provider, will compile a list of all discrepancies and completion status. This list should be attached to the front of the Final Package and checked off by the CM as each item on the list is resolved. Once all the items have been resolved, the PgM or designee will complete the Final Audit. The Final Audit can be completed without the Materials Certificate being received, but the lack of the Materials Certificate shall be noted on the Final Audit. The project cannot be closed out until the Materials Certificate is received.

### 13.6.3 Final Payment

For GDOT Let projects, the CM will notify the PgM and GDOT that the project is ready for Final Audit. This request comes after the CM has reviewed the project records using the Construction Manager's Closeout Checklist (prior to requesting a final audit) as a guideline. Upon completion of the Final Acceptance stating final payment authorization date, the PgM will transmit final quantities to the Contractor.

For Local Let projects, final payment is made upon receiving final invoice from the Local Government entity.

These will follow the TIA Contract Closeout standard process.

### 13.6.4 As-Built Plans

For GDOT Let projects, the PM will coordinate with the EOR throughout construction to determine if field changes can be completed as a redline change or if revisions to the plans by the EOR are needed. The PM will coordinate and distribute plan revisions as required and ensure the Contractor has the most current set of plans. Redlined Final As-Built plans should be compiled by the CM or designated CEI provider as directed and submitted to the PgM for review and processing.

For Local Let, On-System projects, the local sponsor shall provide As-Built plans to GDOT prior to Final Acceptance.

For Local Let, non-bridge Off-System projects, local sponsors are responsible for obtaining As-Built plans. For bridge projects refer to Section 12.7 for requirements.

### 13.6.5 Final Acceptance

For On-System and GDOT Let projects, the TIA Office will follow GDOT procedures.

For local let, Off-System projects, the Local Government shall provide written notification to the TIA Office of certification of work and final acceptance.

## 14 Quality Management

### 14.1 Introduction

Quality management includes all the activities that are used to direct, control, and coordinate quality. These activities include formulating a quality policy and setting quality objectives and procedures. They also include quality planning, Quality Control (QC), Quality Assurance (QA), and quality improvement.

Each consultant and contractor is responsible for quality management on their respective contract. The PgM may request to review consultant or contractor quality management plans.

#### 14.1.1 Quality Assurance Elements

The basic QA elements include but are not limited to the following:

- Development and implementation of quality plans, procedures and instructions
- Quality management organization and personnel qualifications
- Design and management control
- Review and control of contract drawings and text documents
- Procurement control, quality records and electronic data file control
- Indoctrination, training, and certification
- Verification of all quality requirements (to include reviews, audits, and surveillance)

#### 14.1.2 Quality Control Elements

The basic QC elements will include execution of any (or all) of the following, as applicable:

- Inspections of works
- Tests of materials and equipment
- Control of calibration of measuring and test equipment
- Audit of processes and systems

#### 14.1.3 Design

The [GDOT QC and QA Program](#) has been developed by the Engineering Division of GDOT to ensure the engineering, design, plans and quantities developed by our design offices are supported by comprehensive studies and sound engineering judgment; comply with established policies, guidelines and standards; and contain appropriate design flexibility and cost saving measures. This program shall be the basis for QC/QA on the TIA program.

#### 14.1.4 Construction

##### 14.1.4.1 Requirements

At a minimum, QC/QA shall be performed in accordance with GDOT's Sampling, Testing, and Inspection Manual, standard specifications, supplemental specifications, special provisions or any other sampling or testing requirements such as material provider's recommendations.

For detailed instructions, refer to [The Source](#).

## 15 Safety

This section defines the responsibility for safety for the PgM and each participant involved in the Program including GDOT, contractors, consultants, designers, and inspectors. The contracts assign the responsibility of safety risks on the program to the party most able to control and mitigate those risks.

In addition, the PgM recommends and encourage a "safety culture" on the program which makes it clear that all participants are expected to report known hazards to the appropriate individual or entity responsible for the involved work, as well as perform their own activities in full compliance with applicable laws and regulations.

The PgM is not contracted to provide comprehensive safety services to GDOT. The PgM is required to have a safety program in place for its employees developed in accordance with the local laws and regulations. The PgM safety program includes as a minimum, education and training for the PgM staff commensurate with company policy and the hazards expected to be encountered during the program. The PgM is ultimately only responsible for the safety of its employees.

The PgM is not responsible for job site safety, construction means and methods, or the safety for the owner, contractors, consultants, designers, and inspectors. On TIA construction projects, the contractor is solely responsible for the safety and welfare of his employees and for the protection of property, other program stakeholders and the general public. The contractor has to comply with all Federal, State, local and county safety regulations, applicable to his work site.

**IMPORTANT:** All program participants have a duty to call attention to observed unsafe conditions as a key step in preventing injuries to themselves or others. In addition to this basic ethical requirement, other responsibilities for job site safety derive from statutes, regulations, case law and contracts.

## Appendix A – Acronyms

Abbreviation	Description
AASHTO	American Association of State Highway and Transportation Officials
BFI	Bridge Foundation Investigation
BV	Buffer Variance; impacts to vegetative buffers of Waters of the State
CBA	Construction Bidding Administration
CEI	Construction Engineering and Inspection
CSRA	Central Savannah River Area Special District
CM	Construction Manager
CES	Cost Estimation System [Trns•port Cost Estimation System (CES®)]
CRP	Citizens Review Panel
DBE	Disadvantaged Business Enterprise
DC	Design Consultant
DE	Design Exception
DP&S	GDOT's Office of Design Policy & Support
DPM	GDOT Design Policy Manual
DUE	District Utility Engineers
DV	Design Variance
ECB	Environmental Compliance Bureau
EOR	Engineer of Record
EPD	Environmental Protection Division
EPM	Environmental Procedures Manual
FCM	Fracture Critical Members
FEMA	Federal Emergency Management Agency
FHWA	U.S. Department of Transportation, Federal Highway Administration
FPR	Field Plan Review
GDNR	Georgia Department of Natural Resources
GDOR	Georgia Department of Revenue
GDOT	Georgia Department of Transportation
GEPA	Georgia Environmental Policy Act
GSFIC	Georgia State Financing and Investment Commission
GUCC	Georgia Utility Coordination Council
GUPS	Georgia Utility Permitting System
HOGA	Heart of Georgia – Altamaha Special District
H&H	Hydraulic and Hydrological Studies
IGA	Intergovernmental Agreement between GDOT and GSFIC dated 1/1/2013
ITS	Intelligent Transportation System
L&D	Location and Design
LFR	Load Factor Rating
LRFD	Load and Resistance Factor Design
LRFR	Load and Resistance Factor Rating
MC	Master's Certificate Checklist
MOU	Memorandum of Understanding
MPO	Metropolitan Planning Organization
MS4	Municipal Separate Storm Sewer System
MUTCD	Manual on Uniform Traffic Control Devices

Abbreviation	Description
NEPA	National Environmental Policy Act
NHPA	National Historic Preservation Act
NPDES	National Pollutant Discharge Elimination System
NTP	Notice to Proceed
O.C.G.A.	Official Code of Georgia, Annotated
OES	Office of Environmental Services
OMT	Office of Materials and Testing
PDP	GDOT Plan Development Process
PgM	Program Manager
PM	Project Manager
PS&E	Plans Specifications, Special Provisions and Final Estimates
QA	Quality Assurance
QC	Quality Control
QPL	Qualified Product List
RC	Regional Coordinator
RFI	Request for Information
ROW	Right-of-Way
RFQ	Request for Qualifications
RV	River Valley Special District
SAAG	Special Assistant Attorney General
Section 404	Section 404 of the Clean Water Act; impacts to Waters of the U.S.
SFTP	GDOT Secure File Transfer Protocol
SME	Subject Matter Expert
SUE	Overhead/Subsurface Utility Engineer
SWMP	Storm Water Management Program
TIA	Transportation Investment Act of 2010
TIAUE	TIA Utility Engineer
TRC	TIA Regional Coordinator
UAM	GDOT Utility Accommodations Manual
UPC	Utility Protection Center
USACE	U.S. Army Corps of Engineers
USFWS	U.S. Fish and Wildlife Service
VE	Value Engineering
WFI	Wall Foundation Investigation
WRD	Wildlife Resources Division

## Appendix B – Definitions

Blended Project – A project funded in part with non-TIA funds.

Bridge Foundation Investigation (BFI) – Engineering report documenting the existing subsurface conditions, identifying the recommended foundation type, and defining the parameters to be used for the design of bridge foundations.

Chief Engineer – The Engineering Executive appointed by the Commissioner, or other authority as provided by law, and acting for GDOT within the authority and scope of duties assigned.

Construction Manager – PgM staff member responsible for coordinating field operations, CE&I and materials testing coverage and overall execution of construction of the TIA projects.

Design Build – Combining of design engineering and other preconstruction services with construction services into a single contract.

Design-to-Budget – A requirement in the contract between an owner and a design professional that requires the design professional to design a project which meets the needs of the owner without exceeding the budget established by the owner or redesign the project at no additional cost to the owner if the construction bid exceeds the owner's budget.

Engineer of Record (EOR) – A licensed professional engineer in Georgia who develops and/or is responsible for the overall design, design criteria and components of a project. This person may delegate responsibility for the design of a system or component part to a delegated engineer but is ultimately responsible for the delegated engineer's design and the project's total design.

Environmental Documentation – The documentation necessary to ensure a project's compliance with the National Environmental Policy Act of 1969 (NEPA), and/or all Federal and State permit requirements as applicable.

Local Government – Any municipal corporation, county, or consolidated government created by the General Assembly or pursuant to the Constitution and laws of the State of Georgia.

Load Resistance Factor Design (LRFD) – A design methodology for structures that utilize load factors developed using probabilistic methods for the design of structural elements.

Minor Project – A minor project could be classified to be a significant project, but is not always a significant project.

Off-System – Work on a Local road system that does not meet the definition of an On-System route.

On-System – Work on a roadway designated as a State route, Interstate route, or locally owned roadway that traverses over or under a State or interstate route which is designated to be designed to On-System criteria by the Chief Engineer.

Political Subdivision – The State or any local subdivision of the State or public instrumentality or public corporate body created by or under authority of State law, including, but not limited to, municipalities, counties, school districts, special taxing districts.

Plan Development Process (PDP) – GDOT manual that outlines the current process of project development from the project identification through construction award or Final Acceptance for all Federal aid projects under GDOT oversight.

Plan Presentation Guide (PPG) – A guide that sets forth the criteria for the electronic appearance and format of plans. These criteria establish, define, and clarify procedures and standards for plans to be used by GDOT. These criteria are not intended to establish design processes; rather, they are guidelines to assure that all drawings have uniform appearance and include all pertinent information, avoid unnecessary information, and reflect high quality workmanship.

Program Manager (PgM) – GDOT’s consultant representative that will manage, provide oversight and approve all project phases and activities to ensure that all elements of the work meet the required laws, regulations, quality, design standards, schedule and budget. The PgM has delegated authority to act on GDOT’s behalf, and will provide the resources and expertise necessary to understand, and be responsible for, a broad spectrum of services related to the TIA Program.

Project Manager (PM) – PgM staff, GDOT staff or consultant representative responsible for leading a project from its inception to execution, including planning, execution and managing the people, resources and scope of the project.

Soil Survey – A report developed to provide project designers with safe, effective and cost efficient recommendations for the design of roadway foundations, embankments and the treatments for Geotechnical and other problems on the project. Soil Survey reports may also be used by contractors to assist in preparing bids and by project engineers during construction to identify and help solve problems.

Special Districts – The twelve Special Districts based on existing Regional Commission boundaries as created by O.C.G.A. § 48-8-241. A link to a map indicating the District boundaries can be found on the GDOT TIA website.

State TIA Administrator – GDOT representative from the TIA Office with oversight responsibility for the TIA Program and the TIA Regional Coordinator(s).

Storm Water Management Program (SWMP) – The program to provide requirements to Local Governments and staff on addressing storm water runoff to both improve storm water quality and reduce quantity impacts, and protect downstream areas and receiving waters. It does not cover construction site sediment and erosion control practices. Guidance on these practices can be found in the Manual for Erosion and Sediment Control in Georgia.

Subject Matter Expert (SME) – An individual who exhibits the highest level of expertise in performing a specialized job, task, or skill within the organization performing the work; anyone with in-depth knowledge of the subject.

TIA Regional Coordinator (TRC) – GDOT representative from the TIA Office with responsibility for coordinating with the Local Governments within their assigned Special District.

The Source – The Source is GDOT’s online reference for contractors. Within The Source, contractors will find information pertaining to bridges, culverts and retaining walls, construction manual, erosion control, earthwork, pavements, special provisions, specifications, and sampling, testing, and inspection.

Transportation Investment Act of 2010 (TIA) – The Act that created 12 Special Districts of the State and authorizes elections to be held in each Special District which would allow each Special District independently of any other Special District to approve and authorize the imposition of a Special District transportation sales and use tax to fund transportation projects within the Special District. O.C.G.A. § 48-8-240 et seq.

Wall Foundation Investigation (WFI) – Engineering report documenting the existing subsurface conditions, identifying the recommended foundation type, and defining the parameters to be used for the design of wall foundations.

## Appendix D – Utility 1<sup>st</sup> Submission Letter

ADD CONSULTANT LETTERHEAD

Click here to enter a date.

P.I. # [ ], [ ] County  
Project Description: [ ]

**Ref:** *OCGA 32-6-170 & 171 - Request for Project Information*  
*1<sup>st</sup> Submission – Existing Utility Facilities*

Ladies and Gentlemen:

Electronic files of the preliminary plans for the above referenced project have been placed on the GDOT's Secure File Transfer Protocol (SFTP) site for your use. Please contact the TIA Utility Engineer if you do not have access to the SFTP site. Hard copy plans will be provided when requested within **5 days** of the date of this correspondence. Once the plans have been downloaded from the SFTP or received through the mail, the TIA Office requests acknowledgment of receipt of these plans (in writing) within 5 days via email or letter to the address shown on Page 2.

It is requested that you provide the Department with a complete package of all applicable items listed below. Please follow the "Plans Transfer Procedures for Utility Submissions" which can be found via:

<http://www.dot.ga.gov/PartnerSmart/utilities/Documents/EPT/PlanTransfer-ProceduresForUtilitySubmissions.pdf>

- **Mark existing facilities**
  - Include size, type of pipe, type of joints, type of conduit or duct, and pair/gauge accordingly
  - Show the typical depth or design depth, if known, of any underground facilities (ensure that they are shown accurately in both the earthwork cross-sections and drainage cross-sections if available)
  - Show the overhead clearance of any aerial facilities as applicable
  - Include the size of poles, cables, conductors and voltage of aerial facilities
  - Show the distance of your facility from the edge of pavement
- **Mark any existing utility easement(s)** you have within the project limits
  - Describe the existing easement(s)
  - Inform in writing if you desire the Department to acquire the (replacement) easement(s)
- **Submit any applicable bridge space requirements** for your facilities to this Office in writing
  - Indicate the size, weight, and location of the proposed facilities
  - Fully detail the method of attachment to the bridge
- **Submit a letter or email confirming "No Facilities" within the project limits** as outlined in the [Utility Accommodation Policy and Standards Manual](#), current edition

P.L. #, \_\_\_\_\_ County  
Page 2

Please return the complete package no later than **60 days** from the date of this letter in either electronic form or to the following address:

2<sup>nd</sup> Submission – Existing and Proposed Utility Facilities*

Ladies and Gentlemen:

Electronic files of the preliminary plans for the above referenced project have been placed on the GDOT's Secure File Transfer Protocol (SFTP) site for your use. Please contact the TIA Utility Engineer if you do not have access to the SFTP site. Hard copy plans will be provided upon request within **5 days** of the date of this correspondence. Once the plans have been downloaded from the SFTP or received through the mail, the Department requests acknowledgment of receipt of these plans (in writing) within 5 days via email or letter to the address shown on Page 2.

It is requested that you provide the Department with a complete package of all applicable items listed below. Please follow the "Plans Transfer Procedures for Utility Submissions" which can be found via:

<http://www.dot.ga.gov/PartnerSmart/utilities/Documents/EPT/PlanTransfer-ProceduresForUtilitySubmissions.pdf>

- **Check existing facilities** as shown on the plans, for any missing and/or incorrect information and provide mark-ups
  - Include size, type of pipe, type of joints, type of conduit or duct, and pair/gauge accordingly
  - Show the typical depth or design depth, if known, of any underground facilities (ensure that they are shown accurately in both the earthwork cross-sections and drainage cross-sections if available)
  - Show the overhead clearance of any aerial facilities as applicable
  - Include the size of poles, cables, conductors and voltage of aerial facilities
  - Show the distance of your facility from the edge of pavement
- **Mark any existing utility easement(s)** you have within the project limits
  - Describe the existing easement(s)
  - Inform in writing if you desire the Department to acquire the (replacement) easement(s)
- **Coordinate with other Utility Owners** (*listed on sheet 4-001*) prior to marking plans for temporary and/or proposed relocation of their facilities, if applicable
- **Mark proposed relocations** of facilities in conflict with the proposed design on the plans
  - Indicate material types
  - Indicate any proposed betterments
  - Indicate vertical position of proposed facilities on cross sections (if provided)
  - Provide approximate location of proposed facilities including proposed clear zone, proximity to right-of-way, and anticipated crossings
- **Verify any Utility Easement(s)** currently owned OR any applicable Utility Easement(s) previously requested in writing for the Department to acquire on behalf of the Utility Company are appropriately shown on the plans.

*Note: If easements are not shown correctly, please contact the TIA Utility Engineer immediately for resolution.*

## Consultant Company Letterhead

*Note: If easements are not shown correctly, please contact the TLA Utility Engineer immediately for resolution.*

- **Indicate if retention is anticipated for existing underground facilities** in the response for relocations
  - Clearly identify facilities to be retained on the plans
  - Include the depth and condition of facilities to be retained if possible
  - Include a retention request for the facilities identified in accordance with 2.8.B in the [Utility Accommodation Policy and Standards Manual](#), current edition
- **Submit any applicable bridge space requirements** for your facilities in writing
  - Indicate the size, weight, and location of the proposed facilities
  - Fully detail the method of attachment to the bridge
- **Submit any applicable letter or request** as outlined in the [Utility Accommodation Policy and Standards Manual](#), current edition
  - Letter of "NO COST"
  - Letter of "NO CONFLICT"
  - Letter of "NO FACILITIES"
  -
- **Provide applicable utility agreement package**
  - **Lump Sum (LS) or Actual Cost (AC) Agreement** – for reimbursable utilities
    - 3 signed (in blue ink) of the completed "Utility Agreement Estimate" including supporting documentation and the Certificate of Eligibility
    - 3 sets of letter size utility relocation plans including a cover sheet
    - All Utility Company attachments
  - **Contract Item Agreement (CIA)** – for utility work to be performed by the Department's Contractor
    - 3 sets of stand-alone plans (i.e. Water, Sewer, Gas, etc.), including a cover sheet
    - 3 detailed cost estimate with corresponding pay item numbers for the work to be included in the GDOT Let project
  - **Easement Limited Agreement (ELA)** - for documenting and preserving the existing utility reimbursement rights of the Utility for future projects
    - 3 sets of plans (this information shall be on right-of-way plans), including a cover sheet
    - Ensure that Utility easement areas are highlighted and the station numbers are clearly marked on the plans
- **Complete Permit Application** submitted through the Georgia Utility Permitting System (GUPS). If you currently have a "No Conflict" letter, a GUPS permit application is required for the purpose of reviewing the final construction plans and attending the preconstruction meeting.
  - Plans
  - Profiles
  - Utility Adjustment Schedule with work plan
  - Notice of Intent or a Certification Statement
  - Updated Cost Estimate
  - No Conflict Letter
  - No Cost Letter or Reimbursement Letter (whichever applies)
  - Cross Sections (if applicable)
  - Emergency Utility Response Information (EURI) form – (form is attached and will be uploaded with the permit)

Appendix F – Local Utilities Certification w/TIA Utility Coordinator

**THIS SHALL BE PLACED ON LOCAL GOVERNMENT LETTERHEAD**

Utilities Certification

☐ Project No: |  
PI #:  
Description:

☐  
I hereby certify that the appropriate research, field investigation, design considerations and coordination with the Utility Owners on this project, as indentified in the table below, have been performed, and further certify that all known utility related issues have been indentified and resolved as conforming to 23 CFR, PART 645, SUBPART A. All necessary arrangements have been made for resolution to be undertaken and completed as required for proper coordination with the project's physical construction schedule.

**Status of Utilities/Railroad**

- A. ☐ There are **NO** known utilities within the project limits.  
B. ☒ There are known utilities within the project limits.

Utility Company	Utility Type	Status 1, 2, 3 or 4	Conditional Restriction and Time

**Status 1:** The Utility Owner is in conflict with the project and requires relocation by the Utility Owner during construction requiring coordination with the Contractor and the Utility Owner. The relocations are non-reimbursable and the Utility Owner will be relocating at no cost to the Local Government or the Department.  
**Status 2:** The Utility Owner is in conflict with the project and requires relocation by the Utility Owner during construction requiring coordination with the contractor and the Utility Owner. The reimbursable agreement between the Local Government and the Utility Owner is attached.

**Status 3:** The Utility Owner is located within the project limits but requires no relocation work.  
**Status 4:** Utility relocation to be incorporated into the highway construction project contract.

Project Number:  
P.I. Number

Page 2

The Georgia Department of Transportation shall bear no cost in the Utility relocation reimbursement for this project. Any Utility Reimbursement Agreement required for construction of this project shall be between \_\_\_\_\_ and the respective Utility Owner. If a previously unknown conflict arises during construction that requires reimbursement, then \_\_\_\_\_ shall be responsible for all such costs.

## Appendix I – Right of Way Certification

### DEPARTMENT OF TRANSPORTATION STATE OF GEORGIA

#### TRANSPORTATION INVESTMENT ACT (TIA) PROJECT Right of Way Certification

P.I. NO.:  
COUNTY:  
DESCRIPTION:

This is to advise that the right of way and/or easements have been acquired in accordance with the current State Laws, Title 32/Title 22, TIA Manual and FHWA when applicable covering the acquisition of real property on the above referenced project.

Place an "X" at the applicable item:

- \_\_\_\_\_ This project is limited to the existing rights of way and no additional rights of way acquisition was required.
- \_\_\_\_\_ All necessary rights of way, including control of access when pertinent have been acquired including both legal and physical possession.
- \_\_\_\_\_ All Rights of Way are owned by the City/County/State/Federal Government or a combination of these.

If R/W is being acquired: I have audited all files and they are in compliance with all State Laws, Title 32/Title 22, TIA Manual and FHWA when applicable

\_\_\_\_\_ OR \_\_\_\_\_  
TIA Right of Way Manager      Date      City/County Authorized Agent      Date

#### **FOR DEPARTMENT OF TRANSPORTATION USE ONLY**

This is to advise that the required right of way for the above listed project was acquired in compliance with 49 CFR – Part 24, the Relocation Act of 1972(as amended), and all other appropriate federal regulations and guidelines governing the acquisition of right of way for roadway purposes as applicable. Title and possession has been obtained to all rights of way. Where appropriate, relocation and property management have been completed.

## Appendix J – Local Bridge Design Certification

### DEPARTMENT OF TRANSPORTATION STATE OF GEORGIA

#### TRANSPORTATION INVESTMENT ACT (TIA) PROJECT

#### Local Bridge Design Certification

P.I. NO.: \_\_\_\_\_

LOCATION [*City or County*]: \_\_\_\_\_

PROJECT BAND: \_\_\_\_\_

BRIDGE ID: \_\_\_\_\_

DESCRIPTION: \_\_\_\_\_

I hereby certify that I am a principal and duly authorized representative of \_\_\_\_\_

whose address is \_\_\_\_\_ and further certify that the

\_\_\_\_\_ through its Engineer of Record attests that:

1. The bridge configuration meets the drainage design and stream crossing requirements of the local jurisdiction and FEMA, and creates no adverse effects to flood elevations or flood plain limits in the surrounding area.
2. The bridge is designed to resist the hydraulic forces determined by the applicable design guidelines and imposed on the structure by the waterway.
3. The foundations are designed to be installed below the anticipated scour depths, into competent bearing material, and in accordance with the bridge foundation investigation.
4. The scour protection is designed to resist anticipated velocities at the crossing.
5. Engineer of Record Certifies to all above.

## Appendix L – Local Let Material QA Form

### TIA Program - Local Let Project - Materials Quality Assurance

#### SELECT ONE:

- ☐ Request GDOT to perform Materials Testing (Complete Section 1)
- ☐ Request Approval for Consultant Quality Assurance Materials Testing (Complete Sections 1 and 2)

#### Section 1

Project Number/County: \_\_\_\_\_

GDOT Contract ID Number/Proposed Let Date: \_\_\_\_\_

Project Description: \_\_\_\_\_

Local Govt. Responsible for Letting Project: \_\_\_\_\_

Local Govt. Project Manager Contact Name & Number: \_\_\_\_\_

#### Section 2

*GDOT Certified Technicians to be responsible for testing on the project:*

1) Roadway Testing Technicians (RTT) are required to perform field density testing on embankment, pipe backfill, subgrade and all asphalt layers, along with sampling misc. materials

List GDOT Certified Roadway Testing technician(s) who will be performing testing:

GDOT RTT Certification Number	Name/ Employer

2) Concrete \*\*-- GDOT Certified Concrete technician(s) are required to perform all field concrete testing (slump, air, cylinders)

List who will be performing concrete testing & GDOT certification number:

GDOT Concrete Certification Number	Name/ Employer

Attach additional sheets as necessary.

\*\*Please note if a Bridge or other major structure is involved:

NOTE: Labs performing any testing shall be accredited in the testing to be performed (i.e. AASHTO T-22 or ASTM C-39 for concrete cylinders) by the AASHTO Accreditation Program (AMRL and/or CCRL).

#### 3) Hot Mix Asphalt

GDOT specifications require the Contractor to perform mixture Acceptance testing at the plant. GDOT will perform Verification Testing at the asphalt plant as a part of the existing QPL process. The Local Government is responsible for notifying GDOT's Testing Management Operations Supervisor (TMOS) at least one week prior to start of work.

\*send completed form to TIA Office.
